In few of the last discussions of ours we have discussed that how we can make various subjects easy for us, but unfortunately at that time we were not available with more of the point related to chemistry. But not to worry at all as today we are here with few more points related to this subject and how we can make it a fun subject rather than a pain full memory.

'Study with free mind'

I have always believed that, what we study with a free mind stays with us for a longer period of time. And this is the same approach we have to adopt with various chemistry books, that is instead of getting into a pressure that we have to complete this subject, we should think that there is something new we can learn today with the help of these books.

'plan what you do',

I know this is what you have always listened from your parents, but believe me this is one of the best way to study be (it's any subject). Make note what is more important or what can be done or completed with a more ease, get it checked from your teacher or a tutor and then study accordingly.

'memories what you have already done',

Other than your course book, get few more from various online books store in India. And then revise again and again those few topics which you have already completed from these various books which are available to you. This will help you in knowing more that what is there in your school books.

'Teach someone else for a better hold on various topics',

When you are sure that the topic you have completed in your chemistry book is on your tips, try and explain the same to someone else as this will help you in knowing that how much you have understood about the same.

'learn from friends',

I don't know about you people, but when any of my friend explain me about a particular topic I actually understand that in a better manner (even better than various chemistry books). So if the same is the case with you, then you should also team up with your friends and start studying in groups.

'remember different topics with the help of hints'

It is always better to learn different topics with the help of various hints, as you can remember the same easily and for a longer period of time.

It doesn't matter how many point or tips we provide to you to understand a particular subject on a better level, if you are not mentally prepared to study that particular subject, you can never achieve a hundred percent in same. So when ever you start studying a subject make sure to generate some liking towards that topic.

As because a chemistry book price can never make you learn things, it's your liking that will get you

good marks.
