Embedded system technology is ruling the electronics market nowadays because of its unmatched features and numerous benefits to the society. Embedded system is a technology which focuses on two major requirements of the society i.e. luxury and comfort, that is why it is in great demand in the market. Embedded system technology has given many innovative and successful electronics applications like Home automation appliances especially like washing machines, air conditioners, and other appliances like electronic voltage machine, Energy saving systems etc and has helped greatly to make lives of people luxurious and comfortable. Many other projects based on embedded system are in the pipeline and hopefully will be launched soon to make lives of people more luxurious and comfortable.

Embedded systems have eased the lifestyle of people to a great extent and is most demanded electronics technology. But, unfortunately the manpower required to take this technology to the next level is not up to the mark as quality embedded system professionals are very less than required. In fact, top companies are struggling with each other for quality embedded system professionals. As every company wants best embedded system engineering to work for their company and for this purpose these companies are ready to pay any amount which these professionals are asking. The number of job opportunities in embedded system field are very numerous but only for experienced professionals. These top companies don't believe in hiring freshers for their high profile embedded system job as these companies don't want to waste time and capital on the training programs of the freshers' embedded system professionals.

This is the main logic why students from electronics background are running after embedded system training. Embedded system training provides them a chance to learn industrial aspects of embedded system technology development before entering corporate world. Summer training is the best option for embedded system training. There are some quality training companies in Noida which provide industrial training on embedded system. During these summer training programs get to know more about tools and other technological aspects used in embedded companies for development and also get used to the corporate environment beforehand only.

The main advantage of these summer training in Noida for B.Tech students is students get industrial experience which they can easily add to their resume in order to get a job. Moreover, during these summer training students work on projects which have been given by clients for development and during these project development students explore more about technology and its applications which definitely helps students in their future perspective. These top training companies also offer industrial training programs on other popular technologies like .NET training and Java training in Noida only.
