Why bother with IPAF Training? by

Article published on June 20th 2012 | [Education](#)

Plan to start using Spiderlift powered access equipment on a number of sites in the future? Think it might be wise to send your workers on IPAF training that shows them how to use the equipment with total safety in a host of site conditions? That's a sensible step to take and you'll find IPAF Training is fun and informative, plus it'll keep all of your site operatives safe and secure.

IPAF Training is delivered by professionals that are committed to supporting safe work at height practices. Not only does the IPAF Training keep workers safe whilst they are operating powered access equipment it also ensures they are adhering to the current regulations and by law, employers need to ensure proper training is provided. So keep your workers safe and provide them IPAF Training, get them up to speed as soon as you can.

What will I learn?

That's a question people are likely to ask at the beginning of IPAF training. In-depth IPAF Training covers a broad range of disciplines and it covers health and safety regulations, how to inspect a Spiderlift prior to use, and safe operating methods plus the dangers that might be involved when using equipment of this nature. Delegates are taught practical and theoretical elements during the IPAF Training and they take part in pass or fail tests at the end.

Pass the IPAF Training and you'll be given a Powered Access Licence Operator Card (PAL) and a certificate of competency as well. During the IPAF Training a host of methods are used including class based tuition, visual materials and practical assessments outside.

Where does the IPAF training take place?

Training providers offer IPAF Training at centres around the country look for a local company that teaches delegates to PAL standards. Or you could have IPAF Training on-site if your premises and land are suitable and you have a Spiderlift or some other powered access equipment available.

Many businesses find that on-site IPAF Training is more suitable because workers can be trained on the exact equipment they'll be using as part of their daily duties. Pick either option and the IPAF Training is delivered to the highest of standards to support your ongoing health and safety programmes.
