If you are currently on the Blizzard server playing the great game of World of Warcraft, you are probably missing some spices. Blizzard servers are understandably good, with decent features incorporated within. But if you look around on the internet, visit sites such as YouTube and other video sites, you might come across things that are enough surprising for you. You will see people hitting level 200 and many more wayward scenes that you can never achieve on your Blizzard server. Those videos and screenshots are all from the WoW private server spaces that are created by online gamers and hosted by themselves only. Reading this far might have already ignited your desire to join a private server. But you need to hold back your desire and know how the World of Warcraft private server can really impact on your game play, whether opting for any private server would benefit you or not etc.

The first aspect to consider is the brass tacks. When you generally play WoW, you use the game's™ copy to connect with the server of Blizzard which is a completely different domain. Blizzard runs their official server and regulates and restricts use of it. Some of the popular servers are Feathermoon, Anvilmar and Azuremyst that are widely accepted by gamers across the world. The private servers create multiple opportunities for the gamers and let them create characters, improvise them while playing.

You will come across a host of private servers on the world of internet and recent development works have eased the playing of the game more than ever before. There was a time when only 100 people could play the game on a single private server. But upgraded WoW private server capacities more than 100 players to play at a time. Some servers even make it possible for up to two thousand persons to play the game online at a time. Some servers are free and kept to a limited number of gamers and some servers are chargeable and are public in essence. As far the game features are concerned, they are all the way same to the game's™ features as found on Blizzard server.

A private server is an open-source server that is hosted and run by third parties. On several World of Warcraft private server spaces, you will find the original version of WoW and some manifest tweaked versions of the same. Blizzard has nothing to do with these private servers but the company puts every effort to discourage the usage of private servers. But these private servers have been able to attract the gamers as because a lot of creativity is engaged here in the world of WoW private servers. So if you want to really get the thrill of the great game of WoW, you can visit any trusted website and choose wisely your favorite server.
