Article published on July 20th 2012 | Family

granite kitchen worktops or countertops or kitchen benches as they are known in various countries around the world are horizontal kitchen surfaces that are used basically for placing things in preparatory mode before beginning to process them or for placing utensils.

Now, to ensure the longevity and ease in being able to be cleaned, granite kitchen worktops are most in demand. The worktops in question are prone to become oily after a few days in use and hence dirty and unhygienic. But in the case of granite kitchen worktops, the oil and dirt does not adhere to the surface so as to render it nigh uncleanable without losing hundreds of calories.

Apart from granite work tops, there are many other kinds of kitchen worktops that are in use such as slate, marble, wood, concrete, aluminum etc. in spite of these other available materials it is natural stones that is most frequently bought. This is because, apart from utility it plays a great hand when it comes to aesthetics and when the worktop is on display such as in homes. The exact dimensions of the granite kitchen worktop required by your kitchen are devised near the quarry by a fabricator.

The cost of the granite kitchen worktops will obviously depend on the person you buy it from and the marble you select.

Imported granite will obviously cost more than the locally available ones.

The cost will escalate depending on the number of middlemen between the sellers and the quarry that made the granite slabs. It is thus better to research on this point before sealing a deal.

L-shaped granite kitchen worktops cost more money because they involve more craftsmanship but are more appealing and chic.

Cost is the primary point to keep in mind before buying also one should buy from a reputed dealer as there is a great chance of being duped into buying cheaper stone.
