The fireplace can be a wonderful focal point in the home. Updating your fireplace can be one of the easiest ways to add a fresh new look to your rooms. Dimplex electric fires can offer some stunning options for your new fireplace focal point.

Realistic Flame Effects

One of the great advances in electric fireplaces is the innovation of realistic flame effects. Dimplex electric fires can offer some beautiful flame effects that look and feel just like the real thing. These realistic flames can add a real sense of warmth and comfort to any room and offer many benefits over the real thing:

â€¢ Solid fuel burning fires can be a lot of hassle. You will need to have the right ventilation in place (flue or chimney) and this could mean a lot of extra work during installation.

â€¢ You will also need to clean out and prepare wood and coal burning fires and they can take a while to get started.

â€¢ With solid wood burning fires there is a risk of carbon monoxide being released into rooms.

â€¢ Dimplex electric fires can offer a realistic flame effect without all the hassle.

â€¢ You will not need to worry about ventilation and you can simple plug your Dimplex electric fires in and get instant heat.

â€¢ No carbon monoxide is given off by Dimplex electric fires and so you will have peace of mind when you are using these clean and safe realistic flame fires.

â€¢ The premium range â€˜Opt-Mystâ€™ model even offers a smoke effect rising from the faux flames wh makes them look even more realistic and comforting.

â€¢ Another great benefit of Dimplex electric fires is that you can have the flame option on without any heat. This means you can enjoy the comfort of flames even in the warmer months when you do not need any heating on.

â€¢ The flame effect alone uses very little electricity and will add very little costs to your overall energy bills.

Adjustable Heat

Another great benefit of Dimplex electric fires is that the heat output is full adjustable. This means you can get the perfect heat for your rooms at just the touch of a button. This can help you to save heat as you will not have to heat the more than necessary. You will also be able to adjust the heat output of Dimplex electric fires easily with the remote control option offered on the leading models.
