Choosing the Right HID Card Solutions by Michael Sumner

Article published on May 31st 2012 | Hardware

Is security your highest priority? If it is, then HID card readers and HID proximity cards may be the perfect solution for your existing or new installation. Todayâ€™s businesses require dependable, upgradeable, and ultra-secure products. HID iCLASS series readers offer world-class access control with an option for Secure Identity Objectâ„¢ protection, also known as SIO. When youâ€™re searching for the right HID card readers, start by understanding your application then research products that fit your unique application needs.

For projects or applications that require the highest levels of security, itâ€™s possible to obtain card readers and proximity or smart cards sharing SIO protection. This enhanced protection comes in the form of a secure data model that is stored within a single object. This data model may consist of a number of independent, yet associated data objects; including finger prints, e-cash applications, and card numbers. The HID proximity card has become one of the most advanced forms of secure identification in the world. Itâ€™s easily compatible with leading ID card printers and offers a wide range of benefits to nearly any organization.

Cards must be developed for dependability & reliability. For example, the 1386LGGMN proximity cards by HID offer a very consistent read range that is not compromised by body shielding, environmental conditions, or even pocket change and keys. Many companies prefer security solutions that are versatile and portable. When considering the available options, it is important to choose equipment that supports this need for variable card formats and multiple profiles. Choose card readers that meet the specific requirements for your company. HID ID card printers optionally come with a full suite of security software features that make expansion and upgrade much easier for administrators. Having such a printing/encoding device available in-house, means that all aspects of your security program will be fully maintained internally and with greater speed than many companies that choose to deal with an outside provider of security ID cards.

Whether you choose an HID proximity card for a contactless security setup or simply a smart card for computer terminal security, youâ€™ll find a full range of ID card printers, readers, and supplies at www.idcardprintersavings.com. Developed by Mobile ID Solutions, Inc., this innovative website offers a huge range of supplies and equipment by top manufacturers like HID, FARGO, ZEBRA, and Datacard, among others. Youâ€™ll find competitive prices, helpful information, and excellent service to assist you in choosing the best equipment for your organization.
