Article published on January 11th 2012 | Hardware

From the beginning of their origin human beings are trying to improve themselves and for this they are inventing many things with the help of science so that they can make their life very fast and easier. In modern time computer is the most important invention of human being which make their life very fast and easier. From the very fast day of inventing computer human beings are trying to make it faster and user friendly. Computer has two parts one is hardware and another is software. Hardware are the all physical devices used with in a computer like CPU, monitor, mouse, RAM, processer , hard disk, mother board etc. Software is the all nonphysical parts of a computer. Both are equally important. For the development of computer many new hardware are continuous coming in the market which make the computer much more user friendly. Peoples are showing interest to gather the knowledge of hardware so that they can do all the hardware related works of their computer whether it can be their PC or the computer of their office.

In the way of development hardware is not alone he also has a friend called networking which is also very much important in the world of Information Technology. In the world of Information technology most revolutionary concept is server and the web that is internet. The concept of server and internet is totally based on networking. At first when the concept of networking arises it is only used to connect few computers within a building or an organization this is called the Local Area Networking or LAN. Gradually this concept become much more wider and it was starting to connect the computers of a small area like some group of organizations are started to use the network and then this concept was converted into Wide Area networking or WAN. By following the same concept todays networking that is the internet is developed by which the people of the entire world get connected and starts to share many information. This networking concept is so fantastic so that it will remain forever and will gradually developing.

In the daily life of human being the importance of these two friends that is the hardware and networking is gradually increasing. For this reason peoples are trying to gather knowledge about these two. For this reason many institutes are starting to give training about hardware and networking. In almost all most all major cities of the world these kind of training institutes are developing. Like all other major cities in the world in Kolkata many institutes are emerging which are giving such kind of training. The number of networking and hardware institute in Kolkata is gradually increasing. Many fresher students are taking admission to these networking and hardware institute in Kolkata so that they can make their career in this field. Many experienced and trained faculties are giving training institutes. These networking and hardware institute in Kolkata not only provides best faculties but also they are providing lab facilities and study materials. These networking and hardware institutes in Kolkata are able to give many networking and hardware professionals to the IT world not only in India but also in the world.
