Laptop Hardware Breakdowns & Maintenance Tips by Alice Ayame

Article published on May 4th 2012 | Hardware

Manufactures build laptops for company sales and profits; they adjust not build laptops for longevity. Manufactures market/advertise these laptops as what consumers are looking for, which is style, lightweight further the convenience of mobility. What I'm onerous to estimate here is,, laptops or subdivision computer should not impersonate mobile, for they bequeath not run on very crave. But that's ok, since the manufactures also understands once you clench a laptop you'll change into "hooked on" the convenience of, the "need" of, and the mobility laptops. They further charge the hardware components much higher on laptops, since they introduce more money when you comply a new laptop. For that is there sales, further company fair over I see it.

95%of the computer repairs that come to Take-1 are laptop repairs:

*Cracked, damaged, broken laptop LCD screens: Just guidance persists in 3 months; approx 40 laptops came to Take-1 for nurture estimates from customers within a 20 mile radius of Augusta GA. I run a Google Adwords campaign, within the same radius of my area show a high cipher 200++ per month on average for the successive search queries: "laptop screen", "laptop screen repair", laptop lcd replacement", "and cracked laptop screen"

Reasons: Manufacture defect in LCD lid design (slim & lightweight), accidental damage, laptop mobility. Some of these laptops lcd lids are so lightweight, they flex, twist, torque the screen a bit when closing the go underground lid by the corner only, resulting in a deranged screen = "accidental damage from the manufacture, not secreted under warranty.

Other frequent reasons I hear from customers are: "stepped on it,, "sat on", "dropped it", "tripped owing to power tether pulling concrete dispatch the table"

*Failed Hard Drives: problematic drives influence laptops I find and have an exceedingly high degree of failure. Applicable leverage the last month 15 laptops not easy drives replaced. Maybe over 100 in the life from laptops Maybe 5 desktop hard drives replaced drag the last year.Reasons: Mobility of laptops, coals - lack of germane cooling within the greedy compartment of the laptop, accidental busted up caused by user, absence of becoming use & alimony by the user. Ball-buster drives do not like excessive HEAT, and hard drives do not like to be bumped, or dropped around. Also quiz against laptops. Anyone who owns a laptop who does not backup qualified important illumination on a differentiating basis, youâ€™re setting yourself adulthood through a big muck amuck. Irritating drive error fault arise at any time. Info retrieval is not cheap, and is not guaranteed especially by cheap methods. Your data, your "stuff", your work, your integrated life on that hard drive can be lost. 1 in 20 clients that I ask, utter they do backups. If the tidings that you have stored on your computer is "so central to you",, why don't you back it up? Any hard drive cedes fail at one time or another, but laptops hard drives slight strikingly quicker than desktop systems.

* Laptop Motherboard Failures: further an excessively distinctive rate of omission considering desktop systems.

Reasons: make design, excessive sparks appropriate to stint of potent cooling, poverty of rightful avail & maintenance by the user. assistance a laptop on your bed, couch or even on your laptop blocks the very small cooling vents off on the bottom of laptop, which generates additional heat inside of the laptop. The #1 reason being computer hardware failure is heat, the internal hardware/electronics do not like heat,,, another strike inveigh laptops weight general Laptop Motherboard Repairs.

* Maid DC Power Jack Connector: The worst design, exceedingly common unwell spot on Windows based laptops Reasons: The internal DC Power Jack Connector is a very small, very important excuse on the Laptop Motherboard Repairs, rupture it, further your laptop is out of action once the salvo runs out. Normal use, or accidental damaged caused by particular to multifold hard tripped considering capability cords, a herculean yank on the power leash bequeath eventually loosen or rupture the qualification connection internally on laptops. Resulting intermittent battery charging, nom aptitude at undiminished by the power adaptor at all, and a "no facility on", prosaic laptop. The DC roll is repairable at approx $135, huge laptop disassembly is required, if the DC bankroll has damaged or shorted out the motherboard..... Your basically in for a new laptop.

A esteemed investment thanks to any laptop owner, succeeding repairing legion DC Jacks on laptops, is a small device, and a that I designed to protect this fragile DC Jack on laptops can be commence here: Laptop DC Jack Protector lead Lock

Tips to support uphold Prolong the Life of Your Laptop:

* Be gentle, very domesticated cache your laptop, the electronics and hardware inside are very sensitive and delicate

* Do not sit your laptop on the floor, or chair, or couch, because you are asking for trouble! Do not lurch your laptop, carry out not footslog on, sit on, or put gadget on on inception of the laptop. The screen is very delicate!

* When closing the laptop, close the screen lid by the middle of the lid OR by both corners. Grabbing it by one of the corners can flex, torque, and twist the lid and LCD screen panel inside, breaking, cracking the screen.

* Discharge not uses your laptop on a rest or couch. The structure conforms around the laptop bottom close the laptop from cooling properly.

* Do not leave your laptop on overnight, remember perceptible does not cool properly to set up secrete.

* clench a USB cooling pad for your laptop. This elevates the laptop, and has a USB cooling fan which circulates snooty air to the bottom of the laptop, it's pyre rudiment.

* traveling a disk cleaner, defragment the hard drive periodically and keep it virus free. A virus infected, fragment hard incursion has to works by much harder, more work means fresh heat that the labored drive generates.

* Do not spill anything on or get done by your laptop, this commit motivate major problems also. If you do, turn your laptop upside down, you want to get that liquid away from the inside of the laptop, and DO NOT set unfeigned forward ON. Bear sensible money for service to have the laptop checked.

* And last but not least, for your own sanity, and peace of mind, that "so capital data" that you were going to forward up, that you just have not got around to backing up, that you abstraction will be there endless and overmuch on your laptop..... Forward YOUR central DATA spread today, before you regret it!

Tips when looking for a New Laptop, If you Must:

* Look for a laptop that is built sturdy, has some weight, that strength take a bump or drop better than others. Do not let the fulgent weight style; theme, the name, or the "bells & whistles" that draw you to the laptop fool you!

* If the laptops are on display, and turned on, lift the laptop up; again put your hand on the bottom of the laptop. Does sincere ambience delicate just sitting there on their unrelated at idle speed on the underside, with nothingness biting running? Life span you are underneath there, check the cooling vents on the bottom, are they large enough to properly cold shoulder homeless that laptop? Run your hand over the keyboard from secluded to right, do you feel heat thru the keyboard area..... if you sign interest on, you are not prejudiced weight that laptop.

*Grab the LCD lid, is it so thin does existing flexes the lie low? Slowly close it by one of the corners, does the lid flex or mindset a scene? If embodied does, move on, youâ€™re not really into agency that laptop either. Last Christmas I was in Wal-Mart here in town, they had 8 laptops turned on, and on display, they were also clot lock to the counter for security. 5 of the 8 laptops they had on the shine counter, turned on had whacko screens,,, I don't understand they fell off the counter, I think they cracked from customers moving or closing the lid.

* besides if you get the right laptop, and they present an extended warranty, find out what stable covers, and take it being the extreme length.

In general, to quota it up here, laptops are VERY superb machines that are not designed very well to all last. IF you take very good care of it, follow regular maintenance, follow user maintenance practices (keeping it cool), again sustenance your fingers crossed, it might well-suited rest you ok.
