Misleading Information About Day Trading Computers by [Thomasgalvin](#)

Article published on January 9th 2012 | [Hardware](#)

Being able to find the best day trading computer on the market all comes down to the research you're willing to put in. Knowing exactly what's required for day trading computers is very important. With the right resources, you will be able to have a computer setup that is efficient for handling the power and speed that you need to run your day trading business. Beware of internet sites that sell trading computers that cost thousands of dollars.

One of the misleading details that you will find online about day trading computers is that just about any PC can do the job. This may be true if you don't mind having time lapses that will put you behind other day traders. If you're like most, you'll want a day trading computer system that will enable you to view real-time data, allowing you to make quick decisions. Your money is on the line, so it is imperative that you have a PC that won't put your investments more at risk than they already are.

This common misleading detail also states that you can get a Pentium 3 or 4 processor that is less than 1 ghz in speed, that has less than a gigabyte of memory RAM and that uses Windows XP. Not to mention that some will advise that one monitor is sufficient. Of course, many of the computers that you find in stores today come with intel i3-i7 and memory RAM 2 gb and above, none of them have the juice that you'll need to keep your day trading setup up to par.

The software that is out today for day trading requires specific components for it to work properly. Having the minimum requires is sufficient, but it's best to go with more because you'll likely be running more than one software application at one time. With a customized day trading computer, you will have the most up-to-date components, including the newest i7 processor, loads of memory RAM and hard drive space, the highest quality monitors and high definition graphics cards.

As mentioned, you will need to do your due diligence to ensure that the computer system that you are getting is the best of the best. The price of the system you're getting should also be researched, because there are multiple web sites out today that are looking to rip off day traders. Knowledge is power and with an equally powerful trading PC, you will see your day trading capabilities become limitless. Just make sure that you purchase multiple monitors so that you're able to keep an eye on all running programs at one time.
