Paper Shredders: Securing Disposed Information from Unwanted Eyes by Ruby Badcoe

Article published on June 26th 2012 | Hardware

Information secrecy is vital to any business, especially for data that involve product design and manufacturing techniques. The same goes for businesses whose successes are anchored on the uniqueness of their services. In the course of everyday operations, some of these â€œsecretsâ€• may be inadvertently written on documents. Thus, when the time comes to dispose of them, information contained there should be destroyed beyond retrieval.

Industrial espionage is a major concern in business. Companies competing within a particular market niche constantly seek ways to keep their edge over others, and any improperly disposed information that goes into a competitorâ€™s hands is practically heaven-sent for the other party. Fortunately, data disposal using paper shredders have allowed sensitive information to stay secret â€“ permanently. With paper shredders, disposed data are kept from falling into the wrong hands.

It is interesting to know that paper shredders have been around for several decades already. It was developed by Adolf Ehinger, an anti-Nazi German involved in counterpropaganda during World War II. The constant threat of possible questioning from the Gestapo forced him to turn his hand-cranked pasta maker into a data shredder. Today, Ehingerâ€™s improvised pasta maker has evolved into destroying machines that tear data and files into minute pieces.

If youâ€™re operating a business in Los Angeles, proper data disposal is even more imperative. One of the largest and most financially successful cities in the world, Los Angeles is home to over 200 companies, all with their own little secrets of success.

If your company is dealing with a considerable volume of documents, it is advisable to hire a Los Angeles paper shredding company. These companies offer to destroy information you want to be rid of by having them brought to their location. You can also buy paper shredders they offer in the market. Whichever way you choose, you are guaranteed that your information stays irretrievable.

Los Angeles paper shredding companies have many models for you to select from. There is the typical strip-cut paper shredder that cuts paper into hundreds of 12-millimeter strips; however, they produce the highest volume of waste with the least level of security. A more economical and secure model is the ross-cut or confetti-cut chad; these are rectangular or diamond-shaped paper strips that cut papers into thousands of minute, unrecognizable squares.

Shielding your companyâ€™s trade secrets from prying eyes is vital to your continuing success. With Los Angeles paper shredding companies, they make sure you stay successful. You can learn more about paper shredders on ehow.com.
