Printers Price in India by Paul Smith

Article published on April 3rd 2012 | Hardware

Printers are the need of todayâ€™s business and important to carry out each day paper work and required activities. A person needs a new printer but often gets confused on making a choice. Their growing need has made these devices to get transformed from which the popular choices are Laserjet Printers and inkjet printers. They have turned out to be important possession to run businesses but when it comes to selection least of the buyers known the actual difference between the given choices. There are a number of interesting aspects that can be checked and crucial to be compared when one I willing to buy Inkjet and Laser printers:

Where to Use: the most important consideration while making such purchase is to known actually wherein these printers are to be used. Generally, Inkjet printers have turned out as a better choice that is suitable for both home users and small officials where few texts and photos that need to be printed. One the other hand, laser is a better choice for larger office environments where the printing has to be carried out in bulk.

Cost: Perhaps the most important consideration, when the budget is low, it is advisable to go ahead buying inkjet over laser. Cost can be divided into two sub-categories namely the initial cost and operating cost. Inkjet has lower initial buying cost but the maintenance charges are quite high whereas the case is totally opposite with the other types of printer.

Quality: Laser has the ability to print documents with high quality whereas inkjet can tends to spill out droplets of ink and is lower than that of Laser. In case the ability to print is important, you can buy laser but if he quality can be compromise inkjet printer is a favourable choice.

Speed: Speed is one factor that makes lasers so popular amongst corporations and organizations. Inkjets can be used at home which are slower but can print around reasonable pages per minute.

Technology: Technology factor is quite advanced with the laser printers and is found to be low with inkjets.

Networking: The high-end Lasers are chosen for their advanced networking systems that help in connecting to your computer network directly. It therefore cuts down the extra. The ink printer lacks this aspect hence are not preferred by the corporates.

All in all it can be said that both these types have their own positives and negatives. Their choice totally depends on the preferences of the buyers.
