Proximity Access Control Delivers More than Just Security for Healthcare Operations
by [Michael Sumner](#)

Article published on May 18th 2012 | [Hardware](#)

Healthcare facilities around the world require the ability to maintain security without placing obstacles in their medical staff's path. In the event of an emergency, the extra seconds required to gain access to an area are eliminated by the innovative use of proximity cards. There is no need to swipe, punch in a number, or scan because this type of system functions without requiring contact. Overall, proximity access control provides a less intrusive security solution while also introducing a wide range of benefits.

Not only does the use of proximity cards enable hospitals and other facilities to have high quality, counterfeit-resistant visual identification, they also automate tracking of time and attendance easily. This reduces the need for any extra paperwork or time to manually track various human resources functions. Furthermore, color coding can help to easily differentiate many groups within a single organization at a glance; such as instructors wearing blue, students wearing green or infant caregivers wearing pink.

Many healthcare facilities also struggle with ensuring all staff regularly wears their required ID badges. The use of proximity cards provides the ability to tie-in access to crucial on-site necessities like parking lots, dining areas, elevators, and much more. Imagine the simplicity of one smart card for a full range of access points and functions. Eliminate the need for multiple ID cards per staff member by consolidating into a single solution. Maintain the capability to manage variables and security access, in a simple, encrypted, and physically protected medium.

When an ID card printer makes the most sense, consider the high performance FARGO DTC 4500. This innovative and secure card printer delivers high resolution printing, security encoding, and field upgradability across a large organization. FARGO solutions are well known for being easy to integrate in most applications and remain extremely secure. When purchased along with the optional security software suite, this device is locked up tight against counterfeit attempts and unauthorized access.

The DTC 4500 ID Card Printer provides one of the most versatile, secure solutions available in today's marketplace. Fully contained and easy to operate, this unique printer even makes ribbon changes easier with a single cartridge for fast replacements. Available with an optional software upgrade suite to protect and secure access to this ID card printer, the DTC 4500 delivers full color, high quality ID cards with security encoding in a single pass and includes the ability to encode both iCLASS and MIFARE/DESFire formats.

For anyone considering the installation of a similar solution or perhaps simply searching for ID card printers, readers, or supplies, take a closer look at Mobile ID Solutions, Inc. online at www.idcardprintersavings.com. This leading reseller features a comprehensive selection of the top brands of ID card printers, readers, cards, and more at very competitive rates. Learn more about their selection and service by browsing through their complete website.
