Quantum DAT-72 Backup Tape System, Tailor Made for Your Small Scale Business

by Rob_Miller

Article published on February 10th 2012 | Hardware

It is important for every business to set up an efficient backup system. Most owners of small to medium businesses donâ€™t think that a backup system is necessary for them, but the fact of the matter is that backup system is not optional but mandatory in this era. The reason behind this is that these days technology has evolved so much that backup systems do not just perform the task of backing up data, but they also significantly contribute in enhancing the efficiency of the business. Long gone are those days when bulky tapes that consumed a lot of office space and money were used to back up data. Nowadays more compact, advanced and competitive tapes are manufactured by the major brand names like Quantum.

When speaking of tapes manufactured by Quantum for small and medium businesses, it is vital to mention Quantum DAT-72 tape, part number CDM72. This form of tape falls in the category of Digital Data Storage (DDS). This fifth generation of DDS is also called DDS 5 media tape format. This type of tape system is highly competitive and powerful in nature. Both these features are demanded by the businesses that are data-rich in nature. However this not mean that Quantum DAT-72 tape is not suitable for businesses that are not data rich in nature. It simply means that businesses with extensive data encounter system failure more often, and with this DDS-5 tape they can avoid the chances of failure. This DDS-5 tape is extremely compact and does not require much room for storage; the length of the tape is 558 ft.

It is suitable for businesses all around the world because it can work without any problem between the temperature ranges of 5Â°C to 40Â°C. DDS-5 tape has the capacity of securing 72GB of compressed data and 36GB of native data. It can work at processing speed of 25.2GB/hour.DGDAT72WW and 200200 are the part numbers of Sony and Maxell DDS5 tapes. These backup tapes are also widely used by the SMB customers.

In order to get the maximum speed from your Quantum DAT-72 tape drive, you can either connect it directly to the main server through the help of internal SATA or through a USB. This feature allows you to process the largest files without any disruptions and hassles. Another feature worth mentioning in DDS-5 tape drive is â€œTape Shieldâ€•. This feature overcomes the problem of airborne contamination through inbuilt environmentally efficient interface. The environmentally efficient interface ensures that the life of your tape is extended along with improving integrity of data.

If your office has already installed an older version of DDS tape then you need not worry. The older generations of DDS tapes can be updated to DDS-5 tapes. If your business is small scale in nature and seeking a new backup system then Quantum DAT-72 tape, part number CDM72, is an ideal choice. This tape solution has everything, from reliability to durability, from effectives to cost effectiveness and all this for a very reasonable price. It truly provides value for your money and business. Last but not the least; this DDS-5 tape has also been titled to be a certified solution of â€œReady Backupâ€•.
