The Best Computers for Stock Trading by Thomasgalvin

Article published on January 9th 2012 | Hardware

Human error has proven time and time again to take place without the help of machines. Even the smartest of human beings have had errors befall them. Of course, computers arenâ€™t perfectly error-free, but they do minimize the amount that does occur. When it comes to numbers, calculations and emotions that people deal with on a daily basis in the trading world, computers are more sufficient. Stock trading computers have become increasingly popular because of this. They are able to help us make the right decisions, especially when emotions tend to cloud our better judgment. Luckily, computers donâ€™t feel, so they have no problem with this.

Finding reliable computers for stock trading is the key. Not all computers were created equal, so you wonâ€™t be able to head down to your local electronics store to pick one up. Luckily, there are companies out there on the Web that offer awesome computers for stock trading, that comes with a complete trading computer setup that includes multiple monitors, fast processors, high definition graphics cards and lots of memory RAM and hard drive space. All of this is much needed for day trading â€“ at least, if you want to stay ahead of or keep steady pace with your competitors.

First off, you want to stay away from a laptop computer setup. Off the rip, you should only consider getting desktops because they are better equipped for the tasks that you want to do. Laptops are flimsier and canâ€™t pack the amount of power that desktops can. Of course, that doesnâ€™t mean that y should just grab any olâ€™ desktop off the shelves of Best Buy. A customized computer for stock trading is what youâ€™ll need. These can be found by searching around the Internet â€“ just be wary of shady manufacturers that are looking to overcharge you for mediocre PCs.

You will need a desktop trading computer setup that comes with high definition graphics cards created by ATI â€“ preferably the FirePro 2460 OCle 2.0x16 model. The process should be a i7 â€œSandy Bridgeâ€•, which packs lots of speed, power and intelligence, and youâ€™ll want terabytes, not gigabytes, worth of hard drive space. Memory RAM that is in the double digits is also highly recommended.

Having the correct computer setup for your day trading will allow you to do quick decision making that is required for this industry. Never miss out on an opportunity because you have a computer that canâ€™t deliver real-time data. Do as much research as possible so that youâ€™re able to get a tradi computer that will give you the juice your business/hobby needs. Youâ€™ll quickly learn that a PC thatâ€™ been customized with high quality components will differ tremendously against factory built computers.
