A Facial Hyperhidrosis Effective Solutions by [Tedd Woods](#)

Article published on March 29th 2012 | [Health](#)

Facial hyperhidrosis is a medical condition in Which there is excessive sweating in the facial area, and Usually, in the scalp and neck as well. People Affected by this condition almost always have a towel along, to keep the sweat from dripping to the Collars of Their Suits and Blouses. For women, it makes the use of make-up impossible.

People Affected by hyperhidrosis Usually have someone in the family tree Affected by the Same condition. It can trial without primary or secondary. In primary hyperhidrosis, it is Caused by an overactive sympathetic system. This MEANS That sweat gland, Which is one of the parts of the body Regulated by this system, are always working Overton, resulting sweat it too much. In secondary hyperhidrosis, sweating is Caused by an underlying medical condition, suche as diabetes.

When you have facial hyperhidrosis, note that you do not really sweat 24/7. It is triggered by a lot of things, suche as Too Much Caffeine, the more common and Social Anxiety. Contrari the Popular Belief, hyperhidrosis happens not only the Green Tea people, although That is an Aggravating Factor. You see, your body sweat Regulate the heat. Obesity Makes it Difficult for your body heat in the Regulated Because of the added insulation That Provide fat deposits.

Before you try Any form of treatment, EXCEPT the Over-the-counter antiperspirants, you need to see a doctor. The root cause should-be diagnosed. You Should Find Out Whether your case is primary or secondary. Your doctor will run tests to rule out one or the other. With under these tests, the severity of your facial hyperhidrosis would not Determined, And The Appropriate treatments can therefor not recommended.

One of the more popular options is prescription antiperspirants. Usually, under these are aluminum chloride solutions in higher concentrations. Usually, are they applied once a week. The Less Potent Ones Can Be More Frequently applied. Note That under these products might cause irritation - Something That You Have To be very careful with, since you are going to apply it in the facial area.

You can take medications orally ook. If the sweating is triggered by the most Social Anxiety, then antidepressants might not recommended. For People Who Suffer from hyperhidrosis not only in the face but in Multiple Areas as well, anti-cholinergics might not prescribed, but you might experience side effects as drowsiness suche.

The options are more expensive Botox injections and the ETS (endoscopic thoracic Sympathectomy). Botox injections disable the Sweat Glands. They are Effective if the source of the sweat is a small area, say, somewhere in the forehead. Results Are not lasting long though - only up to 9 months at most. With ETS, you are bound to get a long-term results except when the nerves Regenerate quite quickly. It is recommended for people who have problems not only in the facial area, but in Other spots as well.

You do not have to put up with your excessive facial sweating problem. A trip to the dermatologist or "taking the first step by doing research online and you can yourself from having zero social life.
