At-Home TCA Peel, Why do we Need It by Nicoleflourweens

Article published on December 15th 2011 | Health

TCA or Trichloroacetic acid is a kind of chemical solution made by chlorinating acetic acid. This acid is widely used as a chemical skin peel. When a person undergoes TCA peel treatment, his or her skinâ€™s appearance is improved as the outer damaged layer is removed and fresh underlying layer is exposed. The new layer appears healthy, smooth, well toned and well textured. Consequently, appearance of the person underwent the treatment improves significantly.

Why do we need a TCA peel after all? Why the question of at home TCA peel arises? Well, such other questions are bound to arise to our mind. Letâ€™s find out the most relevant clarifications to these doubts.

TCA peel is a more effective chemical peel compared to the light or mild alpha hydroxy acid peels. TCA is a medium depth chemical peel that works better and deeper than the alpha hydroxy acid peels, but produces less dramatic results than a deep or phenol peel. A TCA peel treatment proves very effective if you have fine surface wrinkles, age or liver spots, dark circles under the eyes, blemishes and blotches, and superficial acne scarring.

The degree of depth of penetration of a TCA peel can be controlled according to the need of the treatment. The depth of penetration of a TCA peel can be adjusted or controlled by altering concentration of TCA. A varying range of 15 to 50% concentration is used in the treatment of TCA peel. The higher the concentrations the deeper will be the penetration and, consequently, better results.

Now, when we understand about TCA peel and want to undergo its treatment, many of us find it not practicable due to its cost if done at the office of a skin care professional. At-home TCA peel brings good news for those who want to avail the benefits of TCA peel while not straining their budget. At-home TCA peel can be done at a very reasonable cost if you carefully purchase the right peel with the right concentration that suits your conditions.

Normally, a TCA peel treatment is highly recommended to be done by a skin care professional. It is a medium depth chemical peel that can cause many discomforts if not done properly or if the instructions are not followed seriously. You have to observe many precautions and before and after treatment care is essential to ensure you get the right results and avoid any undesirable results.

If you want to go for the at-home TCA peel treatment, you have to get all the relevant details before you touch the procedure. It is essential since the effect of a TCA peel is deeper than the alpha hydroxy acid peels. You have to take some pre-treatment steps to ensure you get the best of the TCA peel. You have to maintain the right timing and concentration of the acid during its application on the skin. Likewise, you have to take many precautions after the treatment to ensure a normal and faster recovery and to avoid any side effects or discomforts. Many things are to be done especially after the treatment, and failing to do so, can result in skin damage.

If you intend to go for at-home TCA peel, you should collect all the relevant information, check reviews of people who regularly use this peel at home, and then take help, if possible, of a person who has some experience in this treatment. If you are doing the peel the first time, having an experienced friend around means you do not commit any mistake that could take you far away from the peeling.
