Article published on December 18th 2011 | Health

Breaking of fire is news which can bring panic to a huge crowd in just a few seconds. Especially in public places where there is a large mass present, like a park, museum or maybe a workplace. Unless someone doesnâ€™t know what to do exactly there are chances that many people can be injured and barely anyone will be able to escape the premises.

Although industrial fires are only 10% in overall fire incidents in the U.S., still, experts say that it is important to lower these numbers to ensure safety, high mortality rate, and eliminate huge property losses.

According to the statistic surveys itâ€™s clear that breaking of fire at a workplace is a major concern for many people. There are a number of ways which can cause fire at work premises, apart from people working for industries where fire is always a risk, even to small offices where smoking materials, paper piles and wiring appliance are present. No matter what the reason is, it is highly necessary for any work place to pass all the state laws and federal laws which are linked to fire safety. Moreover all employees must be well trained and educated about fire safety; training should be held to acknowledge all staff members.

Many people assume that safety trainings are of no use, especially when the same thing is being done day in and day out and nothing bad has happened as yet. And there are many people assuming that fire incidents are something that has to happen no matter how much the precaution is set. What needs to be considered is that fire accidents cause numerous losses and not just the loss of property, assets, important documents but also important and priceless lives. With a little bit of precaution and safety measurements, all this loss can be avoided. Safety trainings, advanced technologies, and even common sense can save hundreds and thousands of dollars and lives.

There are quite a lot of things that safety trainings train you with. Having a good knowledge of these things wonâ€™t just safe your life but also quite many peopleâ€™s lives.

The foremost thing that you are taught in fire safety training is to have a fire extinguisher at your work place always ready. The extinguisher should be up to the protection level so it can be used for hazards and dangers that occur during fire emergencies. Also give one person the responsibility to check when the fire extinguisher expires so it can be replaced by a new one.

At times of fire breakout usage of elevator is a complete no-no. Always use the stairs. often need the elevators to reach the top floors in less time.

In a nut shell, every small little thing needs to be considered when it comes to fire emergencies as these can wreak havoc not only to the work premises and also that many lives are at a risk if safety measures are not considered.
