Teeth is as important as our any other body organ, but i would rate teeth higher than our other body elements, firstly because our overall physical health is directly related to our eating habit, and eating habit just come what our teeth allows us to eat, secondly it plays huge difference in our appearance and look. A gap between your teeth can make you self-conscious, low self-esteem and it is also much possible that this may hinder your social life as you may be feel shy or donâ€™t want to show your smile altogether.

Loosing teeth at an early age is very disheartening; there could be many reason for it, such as:

Improper care of dental oral hygiene is one of the major causes of tooth loss.

Sometimes infection in gums may result in tooth loss.

Accident is another cause of tooth loss.

But there is no need to worry or bother at all if unfortunately you find yourself caught in such situation, because dental research and development has become so advanced, that you can get exact replacement of your lost teeth quickly and within budget which is so called false teeth.

There are many ways in which you can go for false teeth, some of which has been discussed here:

Flipper teeth â€“ Flipper teeth is an inexpensive false teeth that fit into the mouth like a partial denture. These false teeth are made out of acrylic and attached to an acrylic resin base. Since flipper teeth are of lesser quality, since the entire apparatus is usually made from plastic as compared to traditional partial denture or traditional denture, they are not considered a permanent solution to tooth replacement. It can only be used for short period of time being until the person can afford to get a permanent tooth replacement.

Dental Bridge â€“ A dental bridge is a type of false teeth that is placed between two crowns, it is usually made up of porcelain that is used in place of missing teeth. A fixed bridge is attached on either side of false tooth or teeth. A bridge is mainly used in case where a front tooth is missing and is more noticeable.

Dental implants â€“ In addition to partial denture or bridge, a much stronger permanent solution has come along and that is dental implants. An implant is placed in a patient's mouth by inserting a small screw into the patient's gum, where it eventually fuses to the jaw and afterwards, an implant is attached. This option not only provides you with a permanent solution for your missing tooth or teeth, but also it naturally fits with the rest of the teeth in your mouth.

So, itâ€™s time to do rather than sitting at home, there are lots of options available to choose from, if planning to have a false tooth. All you have to do is to visit your dentist nearby your location and consult for the required action.
