What is a name? Said Shakespeare. Very true these days it's not the name that matters, but the looks that matter. Whether you are rich, popular, educated or anybody unless you look good no one initiates to approach you to talk or befriend. Such is the importance of looking good. Everybody be it a man or a woman, would like to look good.

When we talk about looks, along with facial features, the look of the body also is also very important. That is the reason that there has been an increase in the introduction of gyms and cosmetic surgery centres. If you are basically good looking but are facing a disfigured body then gym is the solution. But for people who suffer certain deficiencies in the look of the body parts then cosmetic surgery is the solution.

One common problem faced mostly among women is disfiguring of breast. The reasons of it can be that sometimes a woman sometimes by birth does not have a shaped breast, sometimes it so happens that after pregnancy, many ladies due to child feeding face disfiguring of the breast. Having a well shaped body is very essential in the entertainment and media field. Thus, not only with common ladies, there are various popular media personalities who face the problem of disfigured breasts. One solution for this problem is Breast Augmentation.

Breast augmentation is nothing but a medical procedure of enhancing your breast size and shape. Through breast augmentation you fulfil your dream of having a fuller breast. Many a times breast augmentation is confused with breast lift, breast augmentation is a surgical procedure which involves use of silicone or salt water Breast Implants which increase the overall volume of the breast. Breast lift is for those who are facing the problem of sagging of breasts.

The breast implants that are commonly used are either silicone based or saline filled implants. Out of the two, saline implants are preferred because in case of a rupture, the body automatically absorbs it. The only disadvantage of saline implants is that they many a times show ripples through the skin.

While opting for a breast augmentation it is very essential to make it very clear which type of breast implants you prefer. For this a small research on the net would prove beneficial. An internet search or a thorough research is essential because though the breast augmentation surgeries are quite popular it is always essential to get a right surgeon. Also, though breast augmentation gives your breast a better look, it is very essential to know the risks and disadvantages attached to breast implants:

1. Pain in the breast
2. Sometimes Infections
3. Due to rupture bleeding can happen
4. Hardening of the skin around the implant
5. Breastfeeding may become difficult
6. Ruptures leading to leak. This phenomenon is observed in saline implants.

Thus, though breast augmentation is a very good tool to improve your looks, it is essential to act wise.
