How Different Eye Specialists Treat Various Eye Problems by [Vincent Davis](#)

Article published on February 15th 2012 | [Health](#)

They also help you to reflect your innermost emotions. People can tell if you're genuinely sad, happy, or angry by just looking at your eyes. Taking care of one's eyes is essential, as your eyesight is crucial to your daily life.

Studies show that refractive errors—eye defects that can be corrected by eyeglasses—are the most ordinary eye problems in most parts of the world. The most widespread includes myopia (nearsightedness), hyperopia (farsightedness), astigmatism (distorted vision at all distances), and presbyopia (loss of the ability to focus up close). The latter often occurs in people between 40-50 years old. According to research, proper refractive correction can improve the vision of millions of people 12 years and older.

Other ordinary eye disorders include macular degeneration because of old age; diabetic retinopathy; cataracts and glaucoma; amblyopia; and strabismus. These diseases typically require more comprehensive medical attention to cure and/or remedy.

If you have an eye disorder, then you need to see an eye expert. However, you might have trouble identifying an ophthalmologist from an optometrist or an optician. Although they are complimentary fields of eye care, they all specialize in a different part of eye care. An ophthalmologist is a physician who practices surgery and medical care of the eyes. He/she also helps in preventing eye diseases and injuries. Optometrists are essentially health care providers that diagnose, treat, and monitor various eye problems that also affect related structures. On the other hand, an optician is someone who fine tunes and fits optical products such as eyeglasses.

These three disciplines are, as mentioned, related to each other. An ophthalmologist may refer you to an optometrist who can suggest the right eyewear for you. Therefore, eye care centers in Canada usually have an ophthalmologist who refers patients to an optometrist. Langley residents trust.

Eye care professionals should be available under one roof for the convenience of patients. Getting the correct eyewear for your personal needs is easy thanks to every trusted optometrist. Langley BC eye centers are proud to have.

Individuals who go to these eye care providers are diagnosed by an ophthalmologist who, if necessary, will refer them to an optometrist. The optometrist then makes the appropriate diagnosis to identify the type of glasses patients need. The optometrist may refer patients to an optician. Surrey eye care centers have to make sure the prescribed eyewear has the right fit. In all instances, patients are assured that proper procedures are followed to deal with their eye defects as conveniently as possible.
