Managing medical information databases through efficient Medical supply inventory Software by [John Smith](#)

Article published on December 28th 2011 | [Health](#)

The field of health care today is experiencing a massive growth and has come to include several areas of work. Besides research, and healthcare itself, sales, patient information systems, databases, and inventory management have become important elements in the healthcare system. With the advent of thousands of pharmaceutical manufactures, surgical equipment manufacturers, and health care facilities in recent times, a complicated wholesale-retail supply and purchase chain, has evolved in healthcare. The need of the hour for those in this supply-purchase chain is quality Medical inventory software.

Medical inventory software for Pharmaceutical wholesale and retail

If you own a dispensary or if you are a pharmaceutical distributor, then you would need a centralized management system that helps you keep track of medication inventory with details like manufacturing date, expiry date, purchase date, batch no, contact information of the manufacturer, besides localized information about its placement in your outlet. Supply inventory software should be able to handle bulk orders, and also be capable of informing you when certain medication is running out of stock. Every medication that is scanned through the bar code scanner should automatically result in update of the database without any manual intervention. The software should also be able to automatically update changes in vendor pricing policies, besides being able to track receipts against vendor POs.

The benefits of medical supply inventory software for surgical equipment

Manufacturing of surgical equipment today is an industry by itself. Managing surgical inventory in distribution outlets and healthcare centers can be difficult without a good software system in place. A system that can track dispatching/usage, by location, by item, department, user, patient reference, and lot number, can be very useful. This system is particularly very beneficial for management dental surgical implants inventories. Surgical dental inventory software that can keep track of surgical inventory like implants and provide day based reports is more useful than manual bookkeeping owing to the daily usage of large number of implants in dentistry.

Availing quality service and support

When you purchase medical inventory software technical support is an important consideration. No matter how robust the software is, there would be instances when technical support would be indispensable. A good firm will not just assist with the installation of the software at your facility, but will also stay in touch with you 24x7 on all days. You can get assistance with report analysis, assistance for software customization, and system transition
