Visiting Nurses: Indeed Very Helpful in Emergencies by Angie Turner

Article published on May 31st 2012 | Health

A medical situation can erupt in any moment. It is under these situations that the role of visiting nurses comes to great use. Such a nurse is more likely to stand in instances where the case manager is not available.

The visiting nurses are well known as licensed nurses who have the requisite expertise and experience in following up regular routine care for the patient. The specialty of such a nurse is they are always available on emergency calls. Previous experiences have shown they are the ones who attend patients that are about to take the last breath.

The demands for new york visiting nurses are soaring upwards for the kind of care they provide to patients in own homes or the assisted living facilities. One of the main responsibilities is making several rounds in a day. This visit to numerous clients involves performing some routine administration of aid, doing routine evaluations and keeping a tab on caregivers.

Numerous non-profit community organizations and home health care agency deal with New York visiting nurses. Such a nurse is also found to work for government assistance agencies and hospitals as well. In an event that the nurse is very skilled nurse having advanced credentials, chances are great that she might be self-employed. The duties and responsibilities associated with these nurses will largely keep varying from patient to patient.

The clients belonging to health agencies of a large nature often have the full-time or part-time caregivers. The main role of these caregivers is to deliver good daily care and hygienic standards. The role in these situations of the visiting nurse is to determine the wellbeing of the patient and judge whether the patient needs additional care. The aspects that the nurse performs during this evaluation process involves things like taking vital signs, dress bed sores or wounds, change catheters, etc. Each such visit is properly documented for tracking medication regimens and progress of the patient.
