There is no better place to spend a beautiful summer afternoon than out on the deck, but enjoying a deck means protecting it from damage. The two things that are the biggest enemies to any wood deck are water and ultraviolet light. Fortunately, deck coatings are available that make deck waterproofing fast and easy even for an individual that does not consider himself to be very handy. Waterproofing a deck will make it possible to enjoy it for years to come rather than having to pay for costly repairs or replacement.

It takes a surprisingly short amount of time for water to do irreparable damage to a deck, which is why deck waterproofing is so important. Deck coatings designed to protect the wood generally need to be applied every 2 to 4 years, although there are some coatings that promise to outlast even the most regularly used of decks. Choosing the right product or require a person to take a look at the type of wood used in their deck, the environment in which they live and how often they intend to reapply the protectant. Coatings that last longer generally cost more but maybe a better investment for an individual that wants to avoid maintenance as much as possible.

If local conditions include a wet or humid climate then it may also be necessary to apply deck coatings more frequently. Sunny or arid regions may not require deck waterproofing so much as a coating that protects the wood from the harmful ultraviolet light of the sun. Understanding the local conditions will make it much easier to choose the right product for the job. An individual that chooses to use an epoxy coating may find that it is better to rely on experts to apply the product since it can be quite a process.

When done correctly, deck waterproofing can protect the valuable investment that a homeowner has made and ensure that they will have an outdoor living space to enjoy for years to come. Deck coatings should be applied exactly as directed by the manufacturer and it is crucial that the surface be properly prepped since failing to do so can greatly reduce the effectiveness of the product. Taking a little time to do the job right will have a huge reward in the long run. Fortunately, most of these coatings are relatively easy to apply and not very expensive.
