Article published on March 1st 2012 | Home Improvement

The lavishness of having a pool is always associated with a number of concerns ranging from the safety of the users to altering water at regular intervals. Even though most people simply adore the idea of a pool in their backyard, not many are completely aware about the maintenance processes required. Especially when it comes to selecting pool filter, many of the people with a pool in their houses are unsure about the types of filters suitable for their pools..

It is apparent that not paying due attention to pool filter is sure to increase the frequency at which the pool requires change of water. In addition to this, unfiltered water can result in a number of health ailments as well. This is the cause it becomes extremely essential for every pool owner to opt for reliable options such as Hayward pool filters, Intex pool filters, Jacuzzi pool filters, and the like. However, regardless of whether you are going for a Hayward filters or a Jacuzzi filter, you need to be aware of the options you have before you may make the purchase.

Cartridge Filters

To begin with, essentially the most commonly used type of pool filter is cartridge filters. These types of filters operate with the aid of paper cartridges aimed at filtering out debris and other impurities from the water. With a lifespan ranging from three to five years, these filters usually prove to be quite light on the pockets of the buyers.

Sand Filters

A different type and perhaps the most well-known filters in residential pools are sand filters. These filters use silica to attract impurities and may last for up to six years if good care is taken.
