Bee removal: the environmentally responsible choice for bee control by Wild Martin

Article published on April 14th 2012 | Home Improvement

When it comes to bee control, no one wants an infestation near their home. Bees are dangerous, that's true. But they are also living creatures that play an important role in the ecosystem. Because of that, more and more companies are offering live bee removal as a more responsible way of dealing with bees. When compared with more traditional extermination methods, live bee removal is an environmentally friendly, humane option.

When a bee nest is discovered, the tendency is to opt for the destruction of the bees. This method is quick and effective, but it doesn't take into account the vital role bees play in the ecosystem and the food chain. By some estimates, bees are responsible for pollinating the plants that produce about one-third of the word's food-bearing crops. When the bee population is upset, this balance is thrown off which can have very detrimental effects. Fortunately, there are ways to both rid our homes of the threat of bees and keep the ecological balance in check. bee exterminators are only one option.

Ecologically responsible methods of live bee removal focus on relocation, not extermination. The hives and honeycombs are moved to a safer location away from the home, allowing the bees to continue to do their important job while at the same time giving the family peace of mind.

Pest control specialists who specialize in live bee removal will relocate the bees, the honeycomb and the hive. They'll repair the structure left behind so that future colonies are not attracted to that spot. It is important to ensure that the entire honeycomb is removed. Otherwise. it can melt into the surrounding building structure. That can result in staining and damage to the structure. Even more dangerous, because the melted honey can attract not only more bees to the area but also other undesirables such as rodents and insects. Professional bee removal is essential to ensure that the hive is thoroughly remove so as to avoid future infestation.

Live bee removal is without a doubt a dangerous endeavor. There are so many risk factors and safety measures that need to be taken into serious consideration before you attempt to remove any bees from your property. Bee extermination is dangerous enough; live bee removal is even more dangerous. Because of the importance of taking extreme safety measures and because of the potential for danger, it is best to leave live bee removal to the professionals. Moreover, it is so critical that the entire honeycomb and hive be totally removed from the area and many homeowners don't feel they possess the skills necessary to ensure that this level of clean out is achieved. The good news is this: There are pest control companies out there who have the tools, experience and expertise necessary to get the job done both safely and thoroughly. Rest assured that you bee infestation is being taken care of in the best way possible. You'll be able to sleep at night knowing that your family is safe from the threat of bees and that you are doing your part to protect the natural balance of which bees are such a big part.
