Camera Inspection and Re-Piping Services by [Mike Fowler](#)

Article published on March 12th 2012 | [Home Improvement](#)

Tree roots, grass and other molds growing into sewer lines is the biggest problem for the homeowners. Tree roots direct encroach into small hard to see openings and flourish in the sewer line, attaching on to debris, mud, oil, food that typically present in the pipe line system. It can cause severe backups in homes that can cause property damage. Sometimes harsh chemical compounds kill the trees roots but it cannot guarantee the total elimination of roots. Roots can reappear anytime and restrict the flow of water through it. It can damage the complete plumbing system and therefore needs immediate and careful excavation in order to fix the problem.

A sewer camera inspection is necessary to check, inspect and correct the problem. It is the best technique to solve the plumbing problem. A cable mounted camera is typically inserted through the pipe and a live video picture is sent to the camera monitor. It can help to detect the problem and identify possible loop holes in the system. Video taping of the inspection is provided to the house owners so that they can take concrete decisions.

Possible uses of the camera inspection services:

- â€¢ Identifying blockage location and cause
- â€¢ Inspecting pipe lines, drains for cracks and other possible leaks
- â€¢ Checking septic tank integrity
- â€¢ Pipe inspection
- â€¢ Preparation for pipe replacement

Pipe line Corrosion

Most of the time pipe mineral presence can cause low water pressure in faucet, shower or washing machine. The main reason may be the build-up of chemicals, rust and corrosion on the inside walls of galvanized iron pipes. In fact, corrosion continues to build due to the presence of moisture that continuously reacts with the metal. It certainly restricts the flow of water more.

Expert plumbers can easily judge the condition of the pipes. They catch the rusty color of water or discolored water that is caused by the rust. This usually signifies a normal stage of corrosion in the pipes. This may lead to pipe leaks that are caused by corrosion of the galvanized iron pipes. In order to solve all such problems, professional plumbers fix problems through copper re-piping. It is primarily used to fix such problems. They offer re-piping as it is a perfect system that allows you to take a comfortable shower. It gives you great water pressure, eliminates costly water damage repair bills and saves money at the same time.
