Different types of Air conditioner by S.m.azizur Rahman

Article published on November 25th 2011 | Home Improvement

Most of the people who live in different places where there are high degrees of temperature in most places of the world need good air conditioning electric appliances to ease their lives. These appliances are essential in most places like in the office and even in homes. There is wide variety of them in the market, although their purpose is all the same to comfortably regulate the atmosphere. Some of these appliances might be more useful than the others.

In most countries especially those who are in the desert, their lives relies on good air-conditioning appliances to regulate the amount of the electrical units that are required. Having knowledge regarding of different types of air conditioner units, they have different specific features that gives them different names altogether. These units are composed of 2 components and parts that are usually placed in the house or even outside the house. Due to the high temperature and the changing of the atmosphere like the global warming, it has increased the demand of air conditioner in homes or even working places thus making it a necessity rather than a luxury.

There are various types of them which include the Ductless AC, Split AC, Portable AC, Window AC and many others. Here are the specific definitions and the details of it.

Central AC: have great advantages because unlike the other units, it is used to cool a wide area like the shopping malls, supermarkets and also in the theaters.

Window AC: Majority of the people across the world mostly prefer using the Window AC, because it is used commonly to cool small rooms and it serves well domestic use.

Split system AC: Is mostly proffered by anybody who has a demand to cool a large area like a big mansion or commercial buildings. It is also referred as Ducted AC unit and it has been modified to reduce much noise unlike the Window AC. It comprises of two parts which, one is placed outside the house and the other unit placed indoors.

Ductless AC: It is almost the same with the split system AC and is made up of 2 parts that are placed independently one indoors and the other one outside the house. They are used to cool small areas unlike the Split system AC.

There are other various types of air con like the Portable AC unit which makes it perfect for those people who travel often. Although it is meant to cool a small area, it is not supposed to be placed on walls and it can serve as an alternative to those people who travel a lot. Above all it has another advantage of regulating the temperature to advantageous environment hence purifying the air and helps keep dust and mites at bay. Most air conditioner which are recently manufactured are mainly in-build and have added features like the AC units which have dual ability of both cooling and heating systems. These air conditioners can be bought online. You can get the latest updates regarding Air conditioner in product directory.
