Drain Cleaning and Leak Detection Services by Michael Edwards

Article published on March 13th 2012 | Home Improvement

One of the most common causes of blocked pipe lines, drains and blocked toilets include hair, food material, sludge, oil, debris, dirt, minerals, and soap build up. All these together can block any pipe line or drain system and can cause heavy problem to the homeowners. Food substances such as vegetable stocks, grease, oil, paper products and large food materials cause drains to become blocked at any point of time. In order to keep the drains smooth flowing one should not put such substances in the drains.

In order to avoid getting a blocked drain, one should ensure tub and shower drains have strainers. It can trap small and large particles that could potentially cause a drain to clog. It is a good idea to run hot water through the drains once a week. It can help push down the material (oil and grease) that is blocking the drain and smooth flow of water through it.

If your drainage system does become blocked and causing problem, there are various things to consider before you call an expert plumber. You can remove the drain stopper to clean away any assorted build up. Most of the people use plunger. In fact, it is the best tool to clear out clogged drains and loosen the blockage. However, one may use a proven cleaning solution like baking soda, vinegar and hot water to clear out the pipe lines and drain systems. Certain products also work to loosen a clogged drain.

If plunger or any other product fails to respond then you must call a licensed plumber. Expert plumbers can help in both residential and commercial customers to unclog their drains.

Leak Detection

It is necessary in both residential and commercial plumbing system and its avoidance can cause a lot of trouble to the homeowners. It can eventually degrade the value of the property. If you suspect a problem with a leaking pipe in your home, you must call a plumbing technician. They help in advanced leak detection and slab leak repairs. They use the latest technology in order to assess if there is a leak, even underground and in certain hard to reach locations. It is essential to have it professionally diagnosed as inaction may lead to more severe problems. It may include structural damage to your property.

Expert plumbers can identify the problems like high water bills, unexplained wetness on floors, & warm spots on floors, low water pressure, unexplained sounds of dripping or running water and soil expansion or swelling and recommend the best possible solution to the problem.
