Waterbeds have been popular for many decades now. With the latest range of waterbeds available, different types of hard side waterbed sheets and soft side waterbed sheets have become helpful.

The traditional hard side waterbed sheets have been recognized as the ones that contain mattresses within the wooden rectangular frame. On the other hand, the soft side waterbed sheets appear like one of those conventional mattresses that have been designed in such a way that fit most of the standardized frames of waterbeds, which makes it one of the most perfect compliments for pre-existing furniture in the bed.

Waterbeds help in improving the posture of the back, adding support to the back. It also helps in increasing oxygen and blood circulation throughout the human body. Such mattresses are hypoallergenic by nature, and ideal to prevent any irritation or allergy, thus providing comfort to the optimum.

Like all types of beds, waterbeds are available in different sizes. Although width might vary with the side, most of the waterbeds are 84" in length. There are some common sides, such as the Super Single, King and Queen. For the modern needs, there are single and full size beds that fit the requirements of everybody.

Hard side waterbeds require some specially designed hard side waterbed sheets that will fit these beds appropriately. Unlike some of the usual bed sheets that require elastic around the edge of fitted sheet, these hard side waterbed sheets come with triangular corner pockets that the corner of liner can fit into. There are different styles of hard side waterbed sheets, such as Attached Waterbed Sheets, Unattached Waterbed Sheets and Attached Waterbed Sheets having Stay-Tight Poles.

Similarly, the soft side waterbeds also look like the conventional beds that can also be used with the traditional frames of bed. The typical soft side waterbed sheets have deep pockets that have become the ultimate choice for styles of waterbeds. There are soft side waterbed sheets that have been typically designed with elastic in and surround the edge of fitted sheets. These flat sheets can be attached or left unattached at its foot.

Before buying any variety of waterbed sheets, either conventional or the latest ones, it is important to measure the mattress, including its depth. The sheets should be purchased considering the pocket size so that it fits properly to get deep under the mattress and there is some fabric that can be used for tucking under mattresses. These sheet styles work very effectively for all types of soft-sided waterbeds.

Now that all the options are known, one can choose the most preferred styles of waterbed sheets. These are available in different sets and in the form of separate or isolate sheets too. Waterbed sheet sets can of hard side or soft side variety can now be obtained from any local shop or online store. There are different fabrics to be chosen from and the colors galore can be chosen to match the interior of the house.
