Helpful Tips in Dealing with the Most Common Door Problems by Raphael Jeanfrancois

Article published on May 23rd 2012 | Home Improvement

Doors are one of the most highly used parts of the house. People come and go through them, and often, we use them with little regard for their integrity; for instance, an upset owner will tend to slam his door. Front doors probably get the most amount of beating, not only from the owner but from the elements as well such as rain, heat and snow; so itâ€™s no surprise then to find them malfunctioning.

One of doorsâ€™ most common problems is loose hinges. Hinges function by keeping your doors latched firmly in place. A major cause of door hinge problems are kids playing monkey by hanging themselves on the door; the hinges are designed to carry the weight of the door only, so their added weight could loosen or even unhinge the door.

Another common problem is sagging doors; they are characterized by having wide gaps from their frames. Sagging doors are caused by hinges that may have been pulled out of the door edge or frame, or when the hinge screws have been loosened due to excess strain. This can be easily fixed by re-securing the hinges with longer or thicker screws.

Sagging doors can also occur because of uneven floor surface. As the door swings, it comes in contact with high spots on the floor, thus slowing or even stopping the doorâ€™s movement altogether. Since it is difficult to correct the flooringâ€™s surface, adjusting the part of the door that comes in contact with the floor would be more practical.

Sticking doors happen when too much paint has been applied to the door or frame. Excessive paint adds thickness to the doorâ€™s surface, eventually leaving too little gap between the door and the frame. External doors, especially those made of wood, are bound to swell during rainy or winter season as they absorb moisture. That is why when it comes to replacing doors Lexington KY residents make sure their contractors are experts in these problems.

Sometimes the hinge side of the door will come in contact with the frame before the door has fully closed. This could mean that the hinges have sunk too far back into the door or frame. This is a common problem on doors Louisville KY residents have to deal with, and a good solution is to pack out the hinges from their recesses.

If your efforts to repair them prove unsuccessful, then itâ€™s about time you seek a professional in door replacement. So if your doors are facing any of these problems, the doors Louisville KY residents choose as replacement could provide you with some helpful pointers.
