How to Install a Deck Railing? by [Editor123](#)

Article published on May 30th 2012 | [Home Improvement](#)

Deck railings are aesthetically pleasing and important from a safety point of view. Railings or fences are installed on a deck as a safety measure. They are installed after complying with local code requirements. You can install your own deck railing or seek the help of a professional fence installer. Before building one, make sure you have a proper blueprint or layout for the deck. You will find this guide helpful if you want to build your own deck railing:

Firstly, you should have a durable deck built outside your house. Professional deck installers usually recommend AZEK decking as they are stain/scratch resistant and split resistant. They do not allow insects and mildew to thrive and are quite durable.

Once you have built a deck, it's time to install the railings. Before planning to install one, you should comply with the local township requirements. Many townships have specific demands related to the structure of the deck railing.

After taking approval from your local township, it's time to build your own deck railing using AZEK decking. Here's a step by step guide:

## Planning a Perfect Layout:

Create a good blueprint of the railing layout and spacing. This way, you can ascertain which areas need a railing install and which areas don't. Normally, steps and stairs are one of the areas where railings are not installed.

The deck railing should be built close to the deck frame than the deck surface. This makes it the rail frame stronger and stable.

Determine the spacing between rail posts. The spacing should not be more than 6 feet from center to center.

## Installing the Deck Railing:

While an experience fence installer is an ideal choice to install deck railings, you can try to set up railings on your own. If you have already planned doing it all by yourself, then consider the following tips:

Once you have considered the area and the spacing between posts, position your railing posts in such a way that they are spaced out evenly.

Use good quality deck screws to attach the fence posts to the deck frame.

Make sure you have pre-notched rail posts for your deck. This way, it will be easier for you to install them. You can find pre-notched posts from any deck providers online.

These tips will be of immense use if you are installing a deck railing on your own without a fence installer. Make sure you have a good sturdy AZEK decking before you plan to install railing posts on your deck.
