Portable Air Conditioning Units for Residents by [Randy Murphy](#)

Article published on March 15th 2012 | [Home Improvement](#)

Today, people want maximum space in their offices or living rooms, this is the only reason they prefer comfortable and less space consuming portable air conditioning units. These are highly simple and economical alternative of having a full air conditioning system. It is nice looking and easy to relocate. One only need is a 13 amp socket for its installation. It is easy to choose from a wide variety of air conditioners that are available to buy from the market. One can find a perfect and suitable portable air conditioning unit contractor in the local area.

The procedure of such systems is also simple and hot air is vented through an open window or a through-the-wall vent, through a discharge hose. These are of often lengthy in size. Some of the units have a robust compressor which is capable enough to blow the hot air into the void. Such units are often used in rooms without ventilation or windows.

HVAC technicians also recommend such system for residential purposes as its running costs is highly economical in nature. These are also known as mobile air conditioning systems as it absorbs moisture from the existing air, which acts as a dehumidifier. It is collected in an internal tank. It also has great inspiring features in order to provide optimum comfort to the homeowners. Its remote control to set temperature is of high value and offers great comfort.

Nevertheless, its exceptional features such as a rotary compressor help for its quieter and smooth operation. Its advanced air filter is helpful to restrict allergens and pollens to penetrate. Single unit portable air conditioners are available with multiple cooling capacities as per the demands of the users. These are also ideally suitable for most of the small or large rooms at home or in small offices. For larger cooling capacity needs a split portable air conditioner is supposed to be the best option. Such systems have separate external and internal components.

An additional feature to consider when buying is the season of the year. However, it is recommended to purchase a portable unit after consultation from the HVAC experts and contractors. They can evaluate your needs and suggest the best system that can offer complete comfort to you. Technicians also provide experts services like ac repairs, air conditioner service, installation, and air handlers. Their specialty services include Air Duct Cleaning, Thermostats inspection, Insulation inspection, Preventative Maintenance and maintenance services.
