Betta Pumps has been engaged into manufacturing of dewatering pumps, submersible dewatering pumps, portable dewatering pumps and construction dewatering pumps which are made using high quality raw materials. These dewatering pumps are highly efficient having air/water separation tank of welded steel. Varying sizes are available for submersible dewatering pumps. These dewatering pumps are available at market leading prices. Betta Pumps rules the market of Dewatering Submersible Pumps and Dewatering Equipment Systems. The powerful automatic vortex impellor drainage pump is used in sumps and dewatering applications. The product heads up to 9.2 meters and ensure flows up to 340 litres per minute. The MST 150 series is a powerful vortex impellor circulating pumps with a stainless steel shaft and pump body. They offer big capacities without high power usage. They are specifically designed for handling effluent water and they find application in various fields such as sanitation and irrigation. The dewatering pumps supplied by Betta Pumps are widely acclaimed across the globe for its durability and high bearing under diverse conditions.

The pumps comprises of jet pumps, end suction centrifugal pumps, liquid ring pumps, horizontal, vertical multi stage pumps, self priming swimming pool pumps, self priming -centrifugal pumps with open impeller and self draining whirlpool. The Dewatering pumps are designed specifically for lifting domestic sewage and other non aggressive liquid. There are many advantages of using a good dewatering pump as follows:

The dewatering pumps are energy saving and they have big capacity with low power consumption.

The Stainless Steel construction ensures greater durability and reliability.

The dewatering pumps come with a float and hence ensure greater performance and efficiency.

Each unit is wet tested and hence guarantees reliable operation.

The maximum head is up to 9.2 meters.

It comes with a 5 meter cable to ensure high mobility and easy of usage.

The construction is impeccable and it contains an Italian dual mechanical seal. The Vortex impeller, 316 stainless steel shaft and 304 stainless steel pump body and shell ensures a robust body and guarantees high quality service. The Thermal protective device allows liquid temperature up to 35 degree Celsius. The dewatering pumps come with a float to make the pump automatic for use in sumps for drainage or just general dewatering. The thermal overload helps in avoiding overheating thus ensuring longer life. Betta Pumps promises 2 year warranty on the purchase of any dewatering pump supplied by the company. The product is a great value for money.
