Why to look for a fully automatic rather than a semi automatic washing machine by [Wilson Singh](#)

Article published on July 16th 2012 | [Home Improvement](#)

I know you are already aware of this, but let me explain you the same again. Basically washing machines are of two types, fully automatic and semi automatic. The one which is known as fully automatic comes with a single drum which works for both washing and drying the cloths, on the other hand semi automatic is the one which comes with two drums, each for a separate job that is washing and drying.

Now, the main reason that we have discussed the basics difference of these washing machines above is that, today we will discover which one of them is better. And when we are out to buy a new one, which should be given more preference by us a semi automatic washing machine or a fully automatic machine.

The very first difference between these two is related to the space they require, as in case if you are thinking to have a semi automatic washing machine then you should make sure that you have a lot of space with you to provide it as these require the same, on the other hand if you are not blessed with a huge or a big house then you should go for the option of fully automatic machine, as it requires almost half of the space if compared to the first one.

Second point of ours is related with the workload, we all are aware that we look for a washing machine so that we can lessen our work load, but in case of semi automatic the same is not reduced to a real low level, as even if the machine is washing and drying the cloths you have to be there as you are required to change cloths from one drum to another. On the other hand if you have a fully automatic Whirlpool Washing Machines, you can get busy with some other work of yours as the same is capable of doing every thing it self.

Availability of different work options is the next point to which our discussion is related. Various fully automatic machines like Onida Washing Machines are coming with many options to chose from while working on them. These options are provided to you so that you can chose how much pressure you want to apply on a cloth, for example if you are washing a delicate silk sari a lower level of pressure will be applied on same. But in case of semi automatic this facility is hard to find.

So now when you are aware of the point of difference, its up to you which one you want to chose, but for the information related to Samsung Washing Machines price you can look for next discussion of ours.
