Wall Fountains are Easy to Install by Discount Water Features

Article published on January 15th 2012 | Interior Design

Installing wall fountains in your home is actually a lot easier than you might suspect, and, though it may look very complicated when you first unpack it from the box, you will find that the installation process is quite simple. Wall fountains truly add a touch of elegance to your home, and they are a beautiful enhancement to your interior dÃ©cor. Here are the steps to help you install your wall fountains easily and quickly:

Step 1: Gather the tools that you will need. A cordless drill will make it easy for you to screw in the bracket, and a level tool will help you to set the fountain just right. A few other simple tools like a measuring tape, pencil, and some screws will also be needed.

Step 2: Mark the place on the wall where the fountain will be installed. Make sure that it is placed at a good height, and in a location where it will fit the dÃ©cor.

Step 3: Remove the wall fountains from their box.

Step 4: Mark the wall where you want the wall fountain to be installed. Make sure that you know exactly how tall and wide the fountain is.

Step 5: Remove the EZ Bracket from the box, and assemble it according to the instruction manual. You will find that all the pieces fit together quickly and easily.

Step 6: Set the bracket up against the wall, and mark the spots where you will be inserting screws, and screw bracket tightly into the wall. If you are hanging the fountain on a concrete wall, you will need to use plugs to sink the screws.

Step 7: Once the bracket is hung, remove the stone from the box and read the instruction manual on how to hang it. The EZ bracket makes it easy for you to hang the stone without requiring any drilling or nailing.

Step 8: Make sure that there is an electrical socket directly behind the fountain, as it will need to be plugged in and the cord is very short.

Step 9: Lift the stone, which will probably require two people to do so. Hold it steady as you attach it to the EZ bracket, and make sure that the bracket will not tear out of the wall once the stone is hung.

Step 10: Once you are sure the stone is connected properly, release it and connect the base tray that will collect the water.

Step 11: Make sure that the water flow parts are all connected properly, and check the manual to be certain that you have connected it right before turning it on.

Step 12: Hang the hood on the top of the fountain.

Step 13: Add the pebbles to the base tray, step back, and admire the beauty of your brand new wall fountain.

Make sure to follow the instruction manual carefully in order to ensure that you get the simple assembly of the fountain right, as that will help to avoid breaking it.
