Article published on August 9th 2012 | Interior Design

When you want to revamp your house, it may be necessary to give its exteriors a new coat of paint. However, if you do not want to spend an amount of money every few years in paining, cement rendering can be a good option. Earlier, Architectural Coatings were used in revamping buildings like churches, administrative establishments and large sized houses but with time it is catching up with regular homeowners too. In cement rendering, sand and lime is mixed with cement to ensure the house exterior gets protective layer that withstands weather elements better.

There are many reasons you should choose Architectural Coatings for your house. First of all, Exterior coatings offered in cement rendering gives you the option to choose from various textures and looks. You can choose to have the house exterior resemble texture of brick and stone if you like so. This will make your house stand out from other buildings in neighborhood. It depends both on your aesthetic taste and monetary capacity.

Apart from enhancing aesthetic appeal of your house, cement rendering can make its exterior resistant to mold, stain and weather related damages better. You can get in touch with Cement Rendering Services to know possible finishes for building exteriors. They use a number of apparatus to give your house walls the finish and appeal that suits your fancy and needs.

Experienced Cement Rendering Services can advise clients regarding the right mix of cement, sand and lime for their houses. It depends a lot on weather of the area and condition of walls that are meant to be plastered. House renovation and construction agencies that carry out these rendering prefer working in suitable weather conditions. In extremely hot and frosty weather, such work need to be carried out with caution to ensure the drying does not get affected. The drying time can vary depending on type of materials used and their ratio.

Nowadays, a lot of homeowners are opting for acrylic rendering for revamping house exteriors and walls. It offers good water resistance and resists fungus formation as well. Besides, it can be applied on several surfaces including concrete and cement blocks. Before hiring a company that offers cement rendering, you can spend some time online to know more on various rendering options and their drawbacks and advantages. This will help you in finding right agency and understand which of their packages fit your bill the best.
