When to Contact a Hypoxia Lawyer?

by Frank Martyn

Article published on December 29th 2011 | Law

If you are worried that your child might be developmentally delayed, this may be due to complications sustained when the infant did not receive enough oxygen during birth, resulting in a condition called hypoxia. Brain damage, depending on its severity, may result in a lifelong disability, and hypoxia is the main cause of brain dysfunction in children. A hypoxia lawyer, who represents children and their parents on a regular basis, for injuries sustained during labor and delivery, is the right choice for you when determining what course of action to take.

What should I ask my hypoxia lawyer?

My child is not doing the same things other children can do at his age, can something be wrong?

Your child’s doctor, who sees him regularly, can probably test for developmentally appropriate behaviors, and advise you if your child is lacking in certain motor skills or speech development. Remember, every child is unique, and not all children develop at the same rate. It is perfectly normal if one child begins to walk at 10 months and another at 18 months. At the same time, there are certain milestones that a child must reach during his growth, so if your pediatrician confirms your concerns the next thing to do is to get your child’s entire medical record, especially his delivery and birth notes, and have an expert review them, to see if certain delays could have been caused on the day your child was born.

A hypoxia lawyer is in the best position to know the leading experts in the field and be able to consult with them concerning your child’s case. Together they will determine if your child’s delay could have been caused due to lack of oxygen to the brain during delivery and birth.

How can I tell if the doctor made a mistake when delivering my baby?

We all know that the birthing process is not a pretty one, and certain complications and emergencies unfortunately arise, even under the best circumstances. What separates those instances from mistakes which may lead to the doctor being held liable for malpractice is the issue of avoidability. Perhaps the baby was too big, and the doctor should have performed an emergency c-section from the beginning, instead of forcing the mother to undergo hours and hours of labor, and causing distress to the unborn baby. Hypoxia could result from unnecessary pressure of the infant’s umbilical cord during the birthing process, and unfortunately, the delay in delivering the baby may lead to permanent brain damage. Hypoxia lawyers are highly skilled in all aspects of hypoxia litigation, and are trained to detect mistakes made by the medical staff during labor and delivery.

Is there a time frame within which I must bring the lawsuit on behalf of myself and my baby?

Medical malpractice cases have specific statutes of limitations, or time to start a lawsuit, which are particular to each state. The cause of action on behalf of a parent for medical, hospital, and perhaps lifelong economic expenses has a different statute of limitations than that of an infant. If you suspect that your child may have suffered brain damage, do not delay in contacting a hypoxia lawyer. The attorneys will review all of the pertinent records and evidence surrounding your case, and advise you on whether there is cause to sue the doctor for malpractice.
