Data Recovery is the process by which data is recovered by [Kaisar](#)

Article published on February 18th 2012 | [Networks](#)

Data Recovery is the process by which data is recovered from an electronic device such as computers and laptops. This process can also be applied to mobile phones as well as external storage devices and even recovery of data from DVD™s and CD™s. This process of recovering data done using some very high tech equipment to ensure that the data is not damaged any further than what damage may have already been caused. We also offer a RAID Recovery service where we are even able to recover your data for you within 24 hours and we can offer this service on site as well, where we come to you, recover the data and transfer the important data back onto your servers to ensure that your operations are not affected. We have extensively experienced engineers who specialise in all kinds of server setups and are able to resolve your recovery query promptly.

We also offer Hard Drive Repair services, whereby we have created our own software which you can use to recover deleted or lost data on your computer. The software has been designed by us to ensure that anyone with basic computer skills can recover their own data without having to pay large amounts of money to have their data recovered.

There are many companies that offer Data Recovery but we ensure that we have local support available for you so that you can have your data recovered as soon as possible. When companies need RAID Recovery they most certainly need someone local who they can contact in a hurry and get them in as soon as possible to ensure that they can recover the data promptly in the least amount of time to ensure that their business is not affected too much. We also specialise in Hard Drive Repair. We will need you send us in your hard drive to us for us to have a closer look and see if we can actually salvage the hard drive. In most cases we can repair them but this depends on the extent of damage and the nature of the damage caused to the hard drive.

As a last resort if the hard drive cannot be recovered we will offer you the option of having Data Recovery done on the existing hard drive to ensure that all your data is safely backed up and is not damaged any further. We also recommend that once a hard drive has suffered extensive damage it may not be worth having it repaired as it may cause issues in the future and it might just be worth investing in a new hard drive. With our RAID Recovery service we ensure that we act quickly and ensure that your data is not lost and is backed up safely to ensure that you do not lose valuable data.

As well as all of our other services Hard Drive Repair service is also offered on an urgent basis to ensure that your work is not affected for too long.
