Hosted Exchange Service - Email Spam Filter & Hosting by [Vikky Karin](#)

Article published on April 26th 2012 | [Networks](#)

Whether the requirement is to build any kinds of website or blog (personal website or blog, medium sized business website as well as database driven big corporate portal) hosted exchange service must be involved. It's the similar concept like any other things. Let us understand it by a universal belief. Everything is acquired space for their existence along with their unique identity in the universe. Similarly, a website also needs some space for their existence with their unique name (identity). This space are provided by various services providers known as web hosting service provider and the process for acquiring the space for a website is known as web hosting. The domain name is considered as unique identity of a website.

There are several issues involved in web hosting. There are various websites which also provide email services to their customers commercially like Yahoo, Gmail and Hotmail along with many others. Moreover, various organizations also use email services for their internal communication between staffs as well as external communications between their clients. For this, email hosting service is required. If an organization has their own website, they can use the email services for their office through their own site. Thus, they have their own email server in this case. It has also been observed that nearly 2% of incoming mails contain viruses. To overcome this problem, email spam filter is required. It is used to filter all virus infected mails so that they could not make any harm to the email server.

In case of web hosting, various information of different site is available which are communicated or exchanged between client and server. In such scenario, spam filter for exchange data is required which prevents computer networks from malicious viruses. This is one of the most responsible works for web hosting service provider to ensure security and safety of all data of the websites which are availing their hosting service. Thus, computer network security is one of the most important concerns for website hosting. There are various types spam server filter available in these days.

There are various network security service providers which provide online spam filter to their clients according to their specific needs and clients. Exchange server spam filter are also provided by many network security service providers. Anti virus protection software is also recommended for personal as well as commercial users to make the data safe and secure according to their special needs and requirements.
