Article published on March 8th 2012 | Others

Multiplayer video games have environments where more than one person can plug in at the same time. Computer games are generally designed to be played against pre programmed or artificial intelligence opponents. Though these are technologically advanced, they lack the ingenuity and the flexibility of human players or thinking. Multiplayer games override these limitations.

With advancements in networking technologies, multiplayer games now offer real time game play. Split screen game play has become a thing of the past and with the advent of Internet, players from different parts of the world can plug to the same game map. Be it in the form of partnership or competition, the games allow players to interact with others. One can individually compete against human contestants or work cooperatively with others in order to achieve a common goal.

Single player games usually lack social communication. Multiplayer games on the other hand are a viable social network. Players can focus on teamwork or form groups with like-minded people. As there is a common aim set for many members, players have a tendency to play together as a team in order to win. This teamwork regularly goes beyond into real life. Some even have romantic relationships with other players. Games offer bonuses and points for each achievement, making the players feel more assured about their talents. These bonuses and extra points reinforce a positive sentiment.

Gamers insist on teamwork and cooperation, which contributes to the social atmosphere of the game. In a world where people turn to technology more than ever, some feel that humanity is getting isolated. But as online gamers show, venturing into the digital world is a gateway to society, not a cut off point. Socializing with other people isn't a thing of the past - it's the basis for the future, and online gamers are leading the way.

Here are a few a multiplayer games that are popular:

Call of Duty: Black Ops

This is a first-person shooter video game released during the November of 2010. The player assumes the role of a foot soldier who can wield various firearms. The online multiplayer mode of Black Ops usually revolves around two teams on a specific mission. The game's multiplayer mode focuses on socialization and customization.

Counter-Strike

Counter-Strike is a tactical first-person shooter game. Counter-Strike pits a team of counter-terrorists against a team of terrorists. Each round is won by either completing the mission objective or eliminating the opposing force. This is one of the most played games.

Halo 3

Halo 3 is a shooter game where players primarily experience game play from a first-person perspective. Much of the game play takes place on foot, but also includes segments focused on vehicular combat. Halo 3 is a science fiction plot set in the years 2552 and 2553.

Battlefield 2

Players fight in a battlefield in an early 21st century fictional war, using modern weapon systems. The multiplayer aspect of the game allows players to organize into squads that come under the leadership of a single commander to promote teamwork.

Warcraft III: Reign of Chaos

Warcraft III is a real time strategy game. It has four playable races; Humans, Orcs, Night Elves and the Undead. Multiplayer mode allows play against other people, via the Internet. The sole objective in melee games is to destroy all the buildings of the opposition.

These games have realistic graphics and are at their best when run under a computer with a high end processor, good main memory and a dedicated graphics processing system. In order to avoid lag, a high speed internet connection like the Time Warner Bundles is required.
