Article published on February 8th 2012 | Pets

Well, deer are indeed beautiful creatures, but when many folks see deer in their yards eating or chewing expensive shrubs to bits, they really start hating it. And when a there are lots of deer hanging around, protecting your agricultural investments becomes quite tough task. Deer has become a huge problem especially for farmers in the United States, as they cause million dollar loss each and every year. Over the years, people have used different types of repellents as deer control method, but still they do not find themselves protected against the threat of deer to their valuable investments. If you have also used some repellents, but are finding them not working for you. Use wire deer fence.

When it comes to buying deer fence systems, there are plenty of options. You will find a wide range of fences available in varied sizes and shapes. Height and width are the most important factors, which everybody should keep in mind. 8 to 10 footers are said to be very effective protection against deer, as they have sufficient height to prevent deer from entering gardens, landscapes, crops, nurseries and many other investments. Some people use 6 feet high fences, but some big deer can jump over them and trample or eat on the crops. A fencing system should be very sturdy and durable. It should bear the pressure from mighty deer or other animals trying to eat or damage your investments.

If you are installing a fence system in your vineyard, you also need to ensure that you use high quality posts. Leave a foot or so at the bottom folded to the outside and slightly underground, preferably covered with rock. This will discourage burrowing animals like groundhogs and rabbits to entering crops. Make sure that you use at least 10 feet wide gates so that you can easily enter your property with and without vehicles. Though there are various types of deer fences available, but you need to choose the one that is made with high-tensile horizontal wires, as it will last for several long years. Such fences are stronger and durable products designed with high pressure bearing capacity.

So, if you are among those stressed people who have tried many deer control methods, but still are facing some threats from deer, using deer fence with high-tensile horizontal wires would be the great idea. When going for deer fence installation, it would be better to choose installers who have wealth of experience and possess all necessary skills to ensure the best positioning and durability of fencing. Remember, an installer should know all latest tools and technologies so that he can provide you with the best deer fencing system, which will work out well as a protective against all sorts of deer.
