Why buy Magnetic Dog Collars? by [Mary Porter](#)

Article published on July 11th 2012 | [Pets](#)

Magnetic dog collars and magnetic bracelets feature a unique magnetic therapy known as the central reverse polarity field. This special pattern of magnetism allows the body of a human or animal to receive a varying magnetic field. This magnetic field has been proven to help with a wide range of conditions in both humans and animals and the technology has now been incorporated into magnetic dog collars to help dogs with a number of conditions. The common conditions that affect dogs that a magnetic dog collar can help to treat are arthritis, poor circulation, eczema, fatigue, joint stiffness, muscle pain and any injuries that a dog has sustained that are taking time to heal. Magnetic dog collars are an alternative form of natural treatment for dogs so you they don't have to take medicines which would result in costly vet bills for dog owners.

When Magnetic dog collars have been used they have in many cases provided dramatic results in helping to treat these symptoms in dogs as well as cats. The great thing about magnetic dog collars is that they are a one off purchase unlike prescription vet medicines. Once you have purchased magnetic dog collars they will just carry on working whenever they are worn. They are reasonably priced and are well worth trying if they can help to minimise your dog's pain and suffering. Magnetic dog collars are designed to look and feel like an ordinary dog collar so your dog won't feel uncomfortable or know any difference when they are wearing one. The magnet is attached to the collar and that should be worn at the front of the neck. Magnetic dog collars still have a steel ring so you can attach dog leads for walks.

Magnetic bracelets are also available that use the same magnetic principles to help treat humans. There are lots of different designs of magnetic bracelets such as bangles, chains, wrist bands and watch style magnetic bracelets. The majority of magnetic bracelets come in gold or silver colours and there are designs for men and women. Magnetic bracelets for humans will help to treat the same conditions as they do in dogs such as joint pain, arthritis, muscle pain and stiffness.
