Article published on February 9th 2012 | Photography

People should be able to easily grab that story but it shouldn't be a shallow one that doesn't connect with the person viewing it. There are so many elements that a photographer can use in so he can convey a message to the people. Below are some basic elements of composition that aspiring photographers should know.

A photographer should be able to easily find a pattern and use it in his photos. A pattern exists anywhere; one just needs to find it and make it his own. Patterns can simply be a set of windows of a building, and when taken at a proper angle and lighting, they can look wonderful. If looked at with uninspired eyes, they can simply be windows and nothing else. Use these patterns and learn how to transform them into areas where stories are told.

In photos, symmetry must either be in it or absolutely void of it. When shooting for landscapes and areas, one should be able to find the balance in the scene. Taking a photo of this balance will always produce a great photo. This should be something that the photographer can have fun playing with so he can keep his audience intrigued.

Photos are two dimensional. Though they are printed on a flat piece of paper, they shouldn't always have that boring look. Playing with texture helps a photograph look better. As an example, in a yoga class, a photographer can easily take photos of different areas where the people exercise and mix it with other layers. Have a chair on the floor and it gives a different texture to the yoga stock images. It makes everything look even more appealing.

A yoga place is a great area to take photos. They convey people exemplifying different emotions. Depth of field is another component that can be used for this. For example, a person close to the lens can do one position while the other on the background becomes a silhouette with another position. It is a great yoga stock photo which can entice people to exercise and take up yoga.

Finally, lines are ways to create order in a list of chaos in a photo. In a yoga class, there are beams and lines everywhere. When people are doing their different positions, the lines in the area create a way for the photo to still look orderly amongst the different people. It makes a very interesting yoga stock photo because of the different ideas and scenarios happening.
