Article published on January 10th 2012 | Satellite

The present era is the age of digital technologies. With the advent of digital television, aerials and DTV boxes, most of the houses have adopted this technology for home entertainment. Consequently, running an aerial installation service is a profitable business. This is because many homeowners prefer to hire an aerial installer as they lack time for installing their devices.

If youâ€™re thinking of starting this business, you should follow the tips mentioned below:

Form your business plan and focus on the type of equipment you would prefer to install, how will your company operate, what type of expansion plans youâ€™ll be offering and how will you rate the plans. Established satellite aerial installation services make use of â€œtax and liabilityâ€• benefits for limited liability partnerships. If this is the case, youâ€™ll have to contact a tax advisor or attorney.

Secondly, youâ€™ll have to apply for employer identification number at IRS.gov website. Thereafter, youâ€™ve to apply for the sales tax license of your state which will allow you to sell your retail items and collect the state sales tax.

If youâ€™re running short of finances, youâ€™ve to apply for an instant source of capital. Either subscribe for a loan plan or get partners for your business. You should take up an insurance plan to secure your items.

Register your company with the national Dish network or the broadcasting department of your state. Additionally, you also need to find a training center for your employees so that they can get technical training classes on regular intervals.

Purchase necessary objects like aerials, wires, signal meters, cable crimpers, drills, tapes, diggers and other mechanical tools. You can either start a storefront service for showcasing your products or get in touch with local satellite selling stores, television retailers and satellite dish manufacturers for references.

Next, focus on promoting your services. You can place advertisements on online websites, newspapers or distribute fliers to local vendors. You can also start additional installation services for setting up decorative lights, doorbells, security systems and other electronic equipment. This is a plus point for your business.

The prices of aerials and cords shall vary therefore you need to buy bulk supplies in order to avoid future costs. Once you get trained aerial installer staff and the necessary equipment, youâ€™ve to focus on finding a potential customer base.

Follow these tips to run a successful aerial installation business.
