Article published on May 20th 2012 | Science

Philippines, United States, China, Puerto Rico, France, Russia, Britain these are just few of the countries which at some point have stories to tell regarding the UFO conspiracy.

What is a UFO?

UFO popularly stands for an Unidentified Flying Object. It is an anonymous rather unusual thing in the sky without any particular name. Are you familiar with the term â€œalienâ€•? If yes, I bet you have already heard about the thousand speculations about them riding into their spacecraft. The substantial proofs of these unidentified spacecrafts nowadays are overwhelmingly high in fact almost every month there are numerous stories concerning them being there at the sky hovering. Mostly all observations pertaining to the notorious theories that the said aircrafts are seen somewhere at the sky was said to be misidentified as aircrafts, kites or even meteors. Though there are still no definite answers as to whether they are certain and that their presence is indeed there, aliens as well as the said spacecraft remains a mystery. Certain investigations are made today by various organizations thinking that they can reveal what lies ahead that secrecy.

Sightings

UFO sightings are increasing as the years past and it seems that they have been all over us ever since mankind started living on earth. A worldwide phenomenon indeed because just referring to various news and reports almost all countries have already experienced the vast mystery UFO exposures. Several tapes and photos have been exposed, some are yet to be evaluated as something natural but some may just be a result of being equipped with the knowledge of deceiving people. Moreover, there are also plenty of reports issued that the said objects have been encountered by people at some point. Which is which, no one can really tell whether these things are true and as to whether they really do exist in real life.

UFO attributes

Out of the increasing number of sightings recorded in history there are a few common things which rather give emphasis on what UFO is really like. Physically, aside from the object being able to fly in space few other attributes are also taken into consideration. Some say the object can be invisible, shaped like a Frisbee disk or a boomerang (a triangle-like object), some having a very bright light, some even said that they come with different sizes.

There are a whole lot of websites appearing in the open today pertaining to the sightings of the said objects. Videos and photos from the various encounters are included and that a lot of people are very much interested in the field. Organizations rise including those in the government regarding the said secrecy. But still, assumptions are growing and growing as the years past and yet nobody can really explain where and how those objects are seemingly coming in and out in space all of a sudden. As I have said, the secrecy remains a mystery and itâ€™s up to you to decide whether you believe that certain things like this exist or itâ€™s just another work of the mind.
