A Calorimeter needs to be extremely accurate by Mary Porter

Article published on June 28th 2012 | Shopping

A calorimeter is a tool which is used to measure the heat of combustion of solid and liquid fuels as well as foodstuffs and other combustible materials to measure the calorific value of the product. As you may imagine, a calorimeter is used extensively where people are preparing food, particularly nowadays as all of the nutrition information of a food item needs to be displayed on the packaging. As it is a scientific tool it is extremely important that it is accurate, particularly if people are relying on the results to monitor nutrition.

How does a calorimeter work?

A calorimeter works by burning the foodstuff and through this it determines the amount of calories contained in the food. Obviously, in this type of area the calorimeter needs to be very precise and this should be something you should consider carefully before deciding on which type to buy.

What are the various types of calorimeter that are available?

Depending upon which type of use you require, there is a calorimeter available for you. Things you should take into account when choosing a calorimeter are how often you would be using it, how precise you require it to be, which appropriate standard methods you will be applying and, of course, what your budget is. The price of calorimeters can vary quite considerably so it is always worth setting your budget right at the beginning of your search. One company which can provide a calorimeter for any purpose is Scientific and Medical Products Ltd.

They have been suppliers of laboratory instruments and systems for over thirty years so you can be sure that the products you receive from them will be reliable and trustworthy. They have established an excellent reputation both for supplying and supporting first rate products so you can feel confident that you will always have the after sales care that you may need. Why not give them a call today to find out more or, alternatively, visit them online at www.scimed.co.uk where you can find out much more about the products they have to offer.
