HDMI to HDMI cable is used for uncompressed HD video and digital audio. These mini connectors are being used in the latest types of televisions and receivers since they are ideal for connecting HD portable devices to standard HDMI connectors. Portable devices are connected with these new high definitions mini connectors. The new types of connectors that are made of the cables are smaller in size when compared to regular connectors and they are specially made for portable devices such as cameras and camcorders etc.

All leading camcorder and camera manufacturers have found that these mini connectors are compatible with their products. The length of a cable and the material with which it is made decide the type of the connector. Usually they are made of plastic and rubber and the connector plugs are of copper or gold plating. When the cable is thicker it has more current capacity and lower electrical resistance.

HDMI to HDMI cable can be purchased from online outlets easily at comparatively lesser prices too. By way of using this type of technically advanced cables, transfer of data can be done more effectively so that the quality of the data is ensured. The data transferred by cheap quality cables will be of poor quality and also cheap cables will not have durability.

Moreover, by using cheap cables, some of the colors are also lost. This type of cable with 2m high speed is used for multi channel digital audio, uncompressed digital video and other controlled functions. It is compatible with HDTV and HDCP. These cables are 2m long and are ideal for connecting DVD Recorders, PS3, Blu Ray DVD and Sky HD etc. These cables have generally a warranty period of 10 years and they are ideal for the latest models of digital camcorders and other devices with mini connectors. The best quality signal transfers are assured by the gold plated connectors and they are resistant to all types of corrosions.

These connectors are used only for the portable HD devices like camcorders and cameras. In order to connect game consoles, DVD-Blu Ray Players etc. the Type A HDMI connector must be used. The mini HDMI connector comes under 1.3 specifications with 19 pins and male plug connector of 13.9mm x 4.45mm. The new type of cable is found most ideal for transmission of uncompressed data â€“ audio as well as video. This cable acts as the best interface for transferring data from DVD Player or Television to amplifier or to a modulator. The best quality interface assures the best output.
