Exactly Why Bluetooth Headsets Surpasses Earphones

Headsets are headphones combined with microphones. Most headsets come with one speaker like telephones, but more and more manufacturers are making headsets with 2 speakers. Bluetooth headsets and earphones are primarily used to receive calls while driving or on the move, but the two have several other uses. Earphones were used many years before Bluetooth headsets became popular, but Bluetooth headsets are more advantageous over earphones in India for several reasons.

Bluetooth headsets with mic have a hands-free profile (HFP) while most earphones are wired. Bluetooth headsets are therefore advantageous in that they eliminate clutter. Not having wires around means you will have an easier time driving. The wires in earphones could even distract you while driving. You need not worry about accidentally breaking wires.

Bluetooth headphones India are advantageous because PDAs (personal digital assistants), mobile phones, and most of todayâ€™s mobile devices support HSP (headset profile). This means you can use your Bluetooth stereo headset India with more than one device. Todayâ€™s media players are Bluetooth-enabled. iPods, DVD players, MP3 players, and CD players today support Bluetooth. Gamers also stand to benefit from Bluetooth headsets since they enable them to communicate with their playing partners wirelessly.

Bluetooth in ear headphones India have audio/video remote control profile (AVRCP), meaning you can use them to listen to music from mobile devices. This profile also means you can receive calls and control your mobile device wirelessly. Picking a call is easier with Bluetooth headsets since all you need to do is click on a button. With a headphone, you have to pick the call from the device, just as you would a normal call.

Bluetooth headsets are particularly effective in telephone-intensive jobs such as in call centers. They facilitate comfortable simultaneous typing and conversation. You could even pair or connect to a PC or a laptop through a Bluetooth adapter or through a laptopâ€™s internal Bluetooth adapter. You could then use your Bluetooth headset for video chats through Google or Skype.

Advances in technology and the great interest in Bluetooth headsets means there are many technologies to choose from. Consequently, getting the best earphones in India for your specific needs is easy. You could get Bluetooth headsets with an external microphone or with microtube and you could get noise-cancelling or omni-directional headsets. You get high quality audio through Bluetooth headsets, thanks to the Advanced Audio Distribution Profile or A2DP.

Wired earphones are difficult to store since you have to take care that the wires are not tangled. This is not a problem with Bluetooth headsets. This is the latest technology and you will therefore have bragging rights when you are with friends.

The fact that Bluetooth headsets are so popular in India means you get low Bluetooth headphones price in India. You can buy such quality Bluetooth headsets as Philips headphones earbuds online. Not only do you save money when you buy headsets online, but you also get to shop anonymously and conveniently, and you get to compare more options.
