LED Tubes and Lights â€“ the Modern Lighting by Julia Roger

Article published on June 1st 2012 | Shopping

In the modern days, we can see LED lightings everywhere â€“ may it be any public or private function or lighting needs of your home. LED stands for Light Emitting Diode. These LEDâ€™s are semiconductor light source. led tubes play an important role when it comes to LED lighting. You can say it as recent trend in terms of modern lighting. Almost every household has LED tubes and lights in their home. It can be said that LED lighting is talk of the town in recent days. These lights and tubes look very beautiful in your home and also save a great amount of money and energy for you. In the early days LED lights used to emit low intensity red light. When it comes to the modern LED lighting the lights are of high brightness and work across visible, ultraviolet and infrared wavelength.

There are many advantages of led lighting over the traditional lighting. The efficiency of these lights does not get affected by the shape and size of the LED lights. There are LED lights available that are tiny. But that does not harm their efficiency. These tiny lights can be assembled easily on the mount board and can be lighted all together for brighter light. The LED lights emit different colored lights without any external source of colored paper. LED lights generally have longer life and are shock resistant. Like every good things LED lights too have disadvantages along with advantages. LED tubes and lights are generally costlier than the incandescent lamps. These lights are highly sensitive to the voltage. High and frequent voltage fluctuations can cause damage to these lights. The LED lights are generally used in the automobiles backlights, traffic signals, decorative lighting purpose etc.
